## SERIES 38F

## Sub-Miniature

## Pushbutton Switches

## FEATURES

- Save Space and Weight
- SPDT and DPDT Circuitry
- Choice of Actuators, Bushings, and Terminations

- UL Recoginized

MODELS in inches (and millimeters)

BUSHING OPTIONS in inches (and millimeters)
B5 Subminiature Pushbutton Switches

BUSHING OPTIONS (CONT.) in inches (and millimeters)

| B7 | $\varnothing .187$ (Ø4.75) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| B9 |  |  | B0 $\begin{aligned} & .225 \\ & (5.72) \end{aligned}$ <br> $\varnothing .314$ <br> (Ø8.00) |  |  |

TERMINATION OPTIONS in inches (and millimeters)

TERMINATION OPTIONS (CONT.) in inches (and millimeters)

Subminiature Pushbutton Switches

## Snap-in Termination Options

(Snap-in termination options have the same PC layout as M2, M6 and M7 options)

## SPECIFICATIONS

## RATINGS

Contact Rating: Q \& G option - 1A with resistive load @ 125 VAC or 28 VDC; R option - 0.4 VA max @ 20 Vmax (AC or DC)
Electrical Life: 30,000 make-and-break cycles at full load Travel: . $030 \pm .010$

MATERIALS
Case: Diallyl phthalate (DAP) (UL94V-0)
Plunger: Polyester
Bushing: Brass, nickel plated
Housing: Stainless steel
Terminal/Switch Support: Brass, electrotin plated
Terminal Seal: Epoxy

ORDERING INFORMATION

| SERIES | MODEL NO. | BUSHING | TERMINATION | CONTACT | ROHS |

| $38 \mathrm{~F}=$ <br> Sub- <br> Miniature <br> Pushbutton <br> Switches | Options: SP8, SP9 (see models for switching positions) | Options: <br> B5, B6, B7, <br> B8, B9, B0 <br> (see <br> bushing <br> options) | Options: <br> M1, M2, M6, M7, V2, S2, S6, S7 (see termination options) | R = Copper alloy, gold plate over nickel plate. <br> Q = Copper alloy, silver plated | T = Lead <br> Free and RoHS Compliant |
|  |  |  |  | G=Gold <br> plate over <br> silver plate |  |

## Example Part Number: 38FSP8B5M1QE

Available from your local Grayhill Component Distributor. For prices and discounts, contact a local Sales Office, an authorized local Distributor or Grayhill.

## Pushbutton Engineering Information

Pushbutton switches are selected not only by their ratings, but also by their contact type. While nearly all rotary switches and DIP switches have wiping contacts, pushbutton switches may have either wiping or butt contacts (see internal views below).

Wiping Contacts are self-cleaning and usually provide a low resistance in circuits where contact resistance is critical. However, the wiping action creates mechanical wear and conductive wear products.

Butt Contacts have less wear than wiping contacts and therefore, have a longer life. They are also smaller. Butt contacts are not self-cleaning, so their contact resistance can vary from operation to operation.

Snap Action switches are basically butt contact switches with a spring mechanism which provides the make and break. The mechanism controls both the operating point and the rate of operation, but adds to the wear of
the switch. The rapid rate of make and break means that these switches are appropriate for high current loads. They usually have a slight wiping action and contact surfaces made of precious metals to minimize their disadvantages.

## Internal Views of Pushbutton Switches

Snap Action

N.O., Normally Open: Switch in which the circuit is open without actuation (with actuator in the "normal" position).

Overtravel: The distance or angle between the operating position and the extreme position to which the actuator may be moved.

Pole: An electrically isolated circuit within a switch; a common terminal and all the selected terminals to which it connects.

Pretravel: The distance or angle through which the actuator moves from its free position to its electrical operating position.

Single Throw Switch: A switch which has only one normally open or one normally closed circuit per pole.

Throw: See Single Throw and Double Throw.
N.C., Normally Closed: Switch in which the circuit is closed without actuation (with actuator in the "normal" position).
