

## Red Pitaya Wi-Fi Dongle

The WiFi dongle is compatible with STEMLab 125-10, STEMLab 125-14, SDRlab 122-16, and SIGNALlab 250-12. It is also compatible with the latest version of Red Pitaya's official OS.

Note that the dongle will only enable your Red Pitaya unit to connect to other WiFi networks, and the ability to establish its own network/access point is not available yet.

It has improved connection stability and range, plus higher speed (40-50Mbps/s).

It comes with an RP-SMA detachable antenna, which allows you to extend it with a cable for better antenna positioning.

Caution: do not use the WiFi dongle without the antenna connected.
