V-CHIP ALUMINUM ELECTROLYTIC CAPACITORS

1. Scope

This specification covers"MRW series" V-Chip Aluminium Electrolytic Capacitors.

2.Operating Temperature Range

Operating temperature range is the range of ambient temperature at which the capacitor can be operated continuously at rated voltage.

3.Characteristics

Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests are as follows.

Ambient temperature : 15 to 35° C

Air pressure: 86kpa to 106kpa

If there may be doubt on the results, measurements shall be made within the following limits.

Ambient temperature : 20±2°C

Air pressure: 86kpa to 106kpa

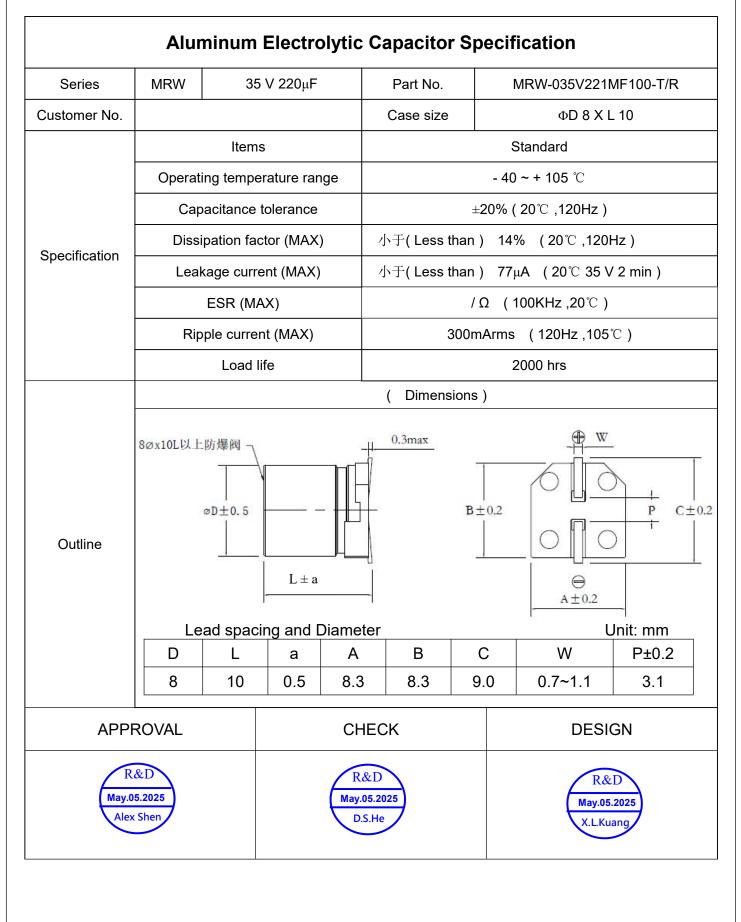

4. Frequency Coefficient for Ripple Current

Case Code	Frequency (Hz) Capacitance(µF)	120	1K	10K	100K
	1.0	1.00	1.50	1.75	1.80
B057-G105	2.2 to 10	1.00	1.30	1.40	1.50
	22 to 1,500	1.00	1.05	1.08	1.08

5.Max. Impedance Ratio

Low	Rated vo	ltage(V)	6.3	10	16	25	35	50	63	100	
Low temperature characteristics	Impedance	Z _{(-25°C})/ Z _{(+20°C})	4	3	2	2	2	2	2	3	120Hz
characteristics	ratio (max)	Z _(-40°C) / Z _(+20°C)	12	8	6	4	3	3	3	4	

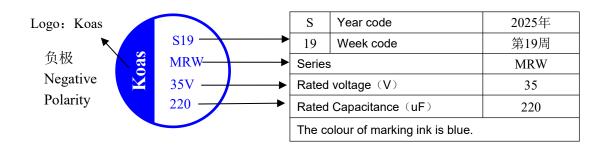

6.Characteristics Table

7.Marking

7.1. Marking on capacitors includes:

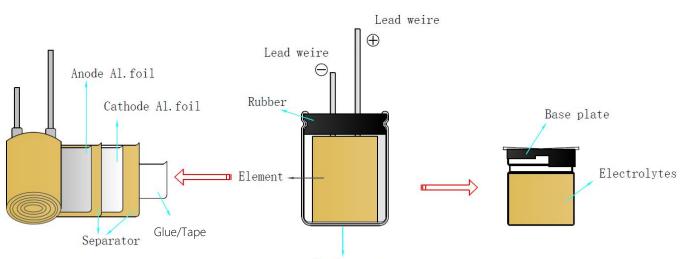

Year Code

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030
Code	N	Р	R	S	Т	V	W	Х	Y

8. Inner conformation drawing and inner constitute parts(curtness drawing)

Aluminum case

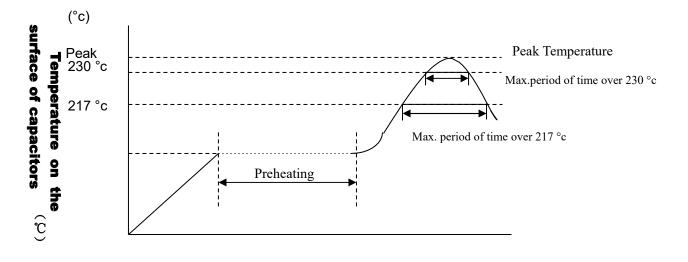

Composing Part	Material
Lead Wire	Fe+Al+Cu+Sn
Case	Aluminum
Base Plate	PPA
Paper	Cellulose
Anode Foil	Aluminum Foil
Cathode Foil	Aluminum Foil
Electrolyte	GBL
Seal	Rubber
Glue/Tape	Poly/OPP

9. Recommended soldering heat conditions:

RECOMMEDEDSOLDERINGCONDITIONSFORALUMINIUM SURFACE MOUNT TYPE

-Air or Infrared reflow soldering

Time(Sec)

SMDshape	size	voltage	preheating	Time	Time	Peak	Reflow
				maintained	maintained	temperature	numbe
				over 217 °c	over 230 °c		r
	B52~E87	4~63∨		≤90 Sec	≤60 Sec	≤260 °c	≤2 times
		63V,80V		≤60 Sec	≤40 Sec	≤250 °c	≤2 times
	F63~G100	4~50V		≤60 Sec	≤30 Sec	≤245 °c	≤2 times
		63V~100,	150 - 180C	≤30 Sec	≤20 Sec	≤240 °c	≤2 times
		400∨	≤120Sec.				
	H135~K21	6.3~50V		≤30 Sec	≤20 Sec	≤240 °c	≤2 times
	5	63~450V	-	≤20 Sec	_	≤230 °c	≤2 times

Remark: Reflow number cannot over 2 times. After first time reflow , must be ensure that the temperature of capacitors became cold to room temperature($5\sim35^\circ$ C) ,then continue second flow.

11.Mechanical characteristics:

NO.	ITEM	TEST METHOD	SPECIFICATION
11.1	Lead strength	(A)Tensile strength: wire lead terminal: $d(mm) \leq 0.5 0.5 < d \le 0.8 0.8 < d \le 1.25$ load(kg) 0.5 1.0 2.0 The capacitor shall withstand the constant tensile force specified between the body and each lead for 10 seconds without damage either mechanical or electrical	
		(B) Bending strength: wire lead terminal: $\boxed{d(mm) \leq 0.5 0.5 < d \le 0.8 0.8 < d \le 1.25} \\ \boxed{load(kg) 0.5 0.5 1.0} \\ \hline$ with the capacitor in a vertical position apply the load specified axially to each lead. The capacitor shall be rotated slowly from the vertical to the horizontal position, back to the vertical position. The 90 ° in the opposite direction and back the original position. Performance of capacitor shall not have change and leads shall be undamaged.	When the capacitance is measured, there shall be no intermittent contacts, or open-or short-circuiting. There shall be no such mechanical damage as terminal damage etc.

K	oas	V-CHIP ALUMINUM ELECTROLYTIC CAI	PACITORS
NO. 11.2	ITEM Vibration resistance	TEST METHOD The frequency of the vibration shall vary uniformly within the range 10 to 55 Hz with the amplitude of 0.75mm, completing the cycle in the internal of one minute. The capacitor shall be securely mounted by its leads with hold the body of capacitor. The capacitor shall be vibrated in three mutually perpendicular directions for a period of 2 hours in each direction.	SPECIFICATION Capacitance: no unsteady. Appearance: no abnormal. Capacitance change: within ± 5% of initial measured value.
11.3	Solder -ability	The leads are dipped in the solder bath of Sn at $235^{\circ}C\pm 5^{\circ}C$ for 2 ± 0.5 seconds. The dipping depth should be set at $1.5\sim 2.0$ mm.	The solder alloy shall cover the 95% or more of dipped lead's area.

12. Reliability:

NO.	ITEM	TEST METHOD	SPECIFICATION
12.1	Soldering heat resistance	The leads immerse in the solder bath of Sn at 260°C±5°C for 10±1seconds until a distance of 1.5~2.0mm from the case.	No visible damage or leakage of electrolyte. Capacitance change: Within \pm 5% of the initial measured value Tan δ : Less than specified value. Leakage current: Less than specified value
12.2	Moisture Resistance	Subject the capacitor to 40 °C \pm 2 °C and 90% to 95% relative humidity for 504 hours.	Capacitance change: Within \pm 20% of the initial measured value Tan δ : Less than 1.2 specified value. Leakage current: Less than specified value

Cautions for Using Aluminum Electrolytic Capacitors

- 1. When reverse voltage is applied on DC aluminum electrolytic capacitor ,the circuit will be short out and the capacitor will be damaged due to abnormal current flows through the capacitor. Please use non- polar types of capacitors when the positive voltage is applied on the cathode terminal.
- 2. When capacitor is used at higher voltage than the rated voltage, leakage current increased, characteristics drastically deteriorated and damaged in a short period may occur as a result. Please take extra caution that the peak voltage should not exceed the rated voltage.
- 3. Sudden charge and discharge

When aluminum electrolytic capacitors for general purpose-use are employed in rapid charge and discharge application, its life expectancy may be shortened resulted from capacitance decrease, heat rise, etc.

4. Storage of the capacitor

 $\textcircled{1}\$ We recommend the following conditions for storage:

Ambient temperature: 5~35°C ,Ambient humidity: <75%RH;

a) Storage life: \leq 12 months;

b) If storage life >12 months, the products need to be charged again before using;

c) If Storage time >three years, the products need to be discarded;

- d) Expiry Date: calculating from the date marked on the sleeve;
- e) Please keep capacitors in the original package;
- f) Avoid storing the capacitors under such circumstances:
- % With water and oil or damp &dewing location.
- ※ With gas and oil.
- % With toxic gases such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, bromine and methane.
- % With direct sunlight, Ozone, ultraviolet rays or radiation.

5. If excessive ripple current is applied on the capacitor, excessive heat will be generated inside, the capacitance will be reduced and capacitor's life shall be shortened. Rated voltage has been marked on the capacitor; therefore, the peak value of the ripple voltage should be less than the rated voltage.

6. Ambient temperature

Life of aluminum electrolytic capacitor is affected by the ambient temperature. It is generally known that the life doubles for each 10° C decrease in temperature.

7. Tensile strength of lead wire

When a strong force is applied to the lead wires or terminals, stress is put on the internal connections, which may result in short circuit, open circuit or increased leakage current. So it is not advisable to bend or handle a capacitor after it has been soldered to the PC board.

8. Heat resistance at the soldering process

During soldering process, secondary shrinkage or sleeve crack may occur when soldering temperature is too high or soldering time is too long.

9. Hole pitch and position of PC board

When designing a PC board, its hole pitch should be designed to coincide with the lead pitch (lead spacing) of the capacitor specified in the catalog or specifications. When a capacitor is forcibly inserted into an unmatched hole pitch, a force will put on the leads and which could result in a short circuit or increased leakage current.

10. Cleaning after soldering

Koas

① The aluminum electrolyte capacitors should be fee halogenated solvents during board cleaning after soldering. Use solvent proof capacitors when halogenated solvents are used.

② After cleaned with the solvent which should proof the quality of capacitors, the capacitors should not be kept in solvent environments of non-ventilated places. Let the capacitors after cleaning dry with hot blast fully above 10mins and the temperature of hot blast should not be over than specified upper limit of capacitors.

11. Adhesives, fixative and coating materials(coating agent)

① Do not use halogenated adhesives and coating materials to fix aluminum electrolytic capacitors.

②Do not cover up all the sealing area of capacitors with adhesives 、 fixative or coating materials(coating agent), make coverage only partial

12. Certificates

- ① ISO 9001:2015
- ② ISO 14001:2015
- ③ ISO/IATF 16949:2016
- ④ OHSAS 45001:2016

※ 符合 RoHS2.0 RoHS compliance

Accord with the latest standard of RoHS2.0, if customers have any special requirments, according to the relevant agreements which signed by both parts.
