### V-CHIP ALUMINUM ELECTROLYTIC CAPACITORS

### 1. Scope

This specification covers"MRE series" V-Chip Aluminium Electrolytic Capacitors.

## 2.Operating Temperature Range

Operating temperature range is the range of ambient temperature at which the capacitor can be operated continuously at rated voltage.

### **3.Characteristics**

Unless otherwise specified, the standard range of atmospheric conditions for making measurements and tests are as follows.

Ambient temperature : 15 to  $35^{\circ}$ C

Air pressure: 86kpa to 106kpa

If there may be doubt on the results, measurements shall be made within the following limits.

Ambient temperature : 20±2°C

Air pressure: 86kpa to 106kpa

### **4.Frequency Coefficient for Ripple Current**

| Frequency (Hz)    |      |      |      |      |
|-------------------|------|------|------|------|
|                   | 120  | 1K   | 10K  | 100K |
| Capacitance( µ F) |      |      |      |      |
| 10 to 150         | 0.40 | 0.75 | 0.90 | 1.00 |
| 220 to 470        | 0.50 | 0.85 | 0.94 | 1.00 |
| 820 to 1000       | 0.60 | 0.87 | 0.95 | 1.00 |

### 5.Max. Impedance Ratio

| 1                                     | Rated vo    | ltage(V)                                     | 6.3 | 10 | 16 | 25 | 35 | 50 | 63 | 80 | 100 |       |
|---------------------------------------|-------------|--|-----|----|----|----|----|----|----|----|-----|-------|
| Low<br>temperature<br>characteristics | Impedance   | Z(-25℃)/ Z(+20℃)                             | 2   | 2  | 2  | 2  | 2  | 2  | 2  | 2  | 2   | 120Hz |
| Characteristics                       | ratio (max) | Z <sub>(-40°C</sub> )/ Z <sub>(+20°C</sub> ) | 3   | 3  | 3  | 3  | 3  | 3  | 3  | 3  | 3   |       |

|         | H135~K21<br>5 | 6.3~50V  |            | ≤30 Sec     | ≤20 Sec     | ≤240 °c     | ≤2 times |
|         | -             | 63~450V  |            | ≤20 Sec     | -           | ≤230 °c     | ≤2 times |

Remark: Reflow number cannot over 2 times. After first time reflow , must be ensure that the temperature of capacitors became cold to room temperature( $5\sim35^\circ$ C), then continue second flow.

### 15.1.5 Sealing Tape Reel Strength

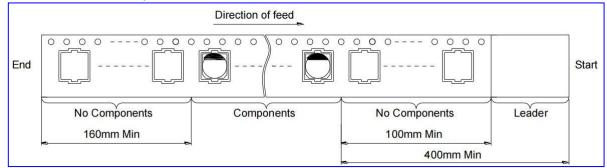

Koas

- 15.1.5.1 Peel angle: 165 to 180°C refered to the surface on which the tape is glued
- 15.1.5.2 Peel speed: 300mm per minutes
- 15.1.5.3 The peel strength must be  $0.1 \sim 0.7N$  under these conditions.

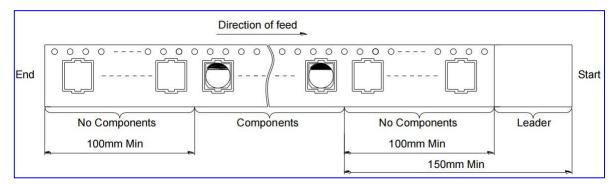

### 15.1.6 Taping method and polarity

### 15.1.6.1 5、6、8 phi

### 15.1.6.2 10 phi

## **Cautions for Using Aluminum Electrolytic Capacitors**

- 1. When reverse voltage is applied on DC aluminum electrolytic capacitor ,the circuit will be short out and the capacitor will be damaged due to abnormal current flows through the capacitor. Please use non- polar types of capacitors when the positive voltage is applied on the cathode terminal.
- 2. When capacitor is used at higher voltage than the rated voltage, leakage current increased, characteristics drastically deteriorated and damaged in a short period may occur as a result. Please take extra caution that the peak voltage should not exceed the rated voltage.
- 3. Sudden charge and discharge

When aluminum electrolytic capacitors for general purpose-use are employed in rapid charge and discharge application, its life expectancy may be shortened resulted from capacitance decrease, heat rise, etc.

### 4. Storage of the capacitor

 $\textcircled{1}\$  We recommend the following conditions for storage:

Ambient temperature: 5~35°C ,Ambient humidity: <75%RH;

a) Storage life:  $\leq$  12 months;

b) If storage life >12 months, the products need to be charged again before using;

c) If Storage time >three years, the products need to be discarded;

- d) Expiry Date: calculating from the date marked on the sleeve;
- e) Please keep capacitors in the original package;
- f) Avoid storing the capacitors under such circumstances:
- % With water and oil or damp &dewing location.
- ※ With gas and oil.
- % With toxic gases such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, bromine and methane.
- % With direct sunlight, Ozone, ultraviolet rays or radiation.

5. If excessive ripple current is applied on the capacitor, excessive heat will be generated inside, the capacitance will be reduced and capacitor's life shall be shortened. Rated voltage has been marked on the capacitor; therefore, the peak value of the ripple voltage should be less than the rated voltage.

6. Ambient temperature

Life of aluminum electrolytic capacitor is affected by the ambient temperature. It is generally known that the life doubles for each  $10^{\circ}$ C decrease in temperature.

7. Tensile strength of lead wire

When a strong force is applied to the lead wires or terminals, stress is put on the internal connections, which may result in short circuit, open circuit or increased leakage current. So it is not advisable to bend or handle a capacitor after it has been soldered to the PC board.

8. Heat resistance at the soldering process

During soldering process, secondary shrinkage or sleeve crack may occur when soldering temperature is too high or soldering time is too long.

### 9. Hole pitch and position of PC board

When designing a PC board, its hole pitch should be designed to coincide with the lead pitch (lead spacing) of the capacitor specified in the catalog or specifications. When a capacitor is forcibly inserted into an unmatched hole pitch, a force will put on the leads and which could result in a short circuit or increased leakage current.

#### 10. Cleaning after soldering

Koas

① The aluminum electrolyte capacitors should be fee halogenated solvents during board cleaning after soldering. Use solvent proof capacitors when halogenated solvents are used.

② After cleaned with the solvent which should proof the quality of capacitors, the capacitors should not be kept in solvent environments of non-ventilated places. Let the capacitors after cleaning dry with hot blast fully above 10mins and the temperature of hot blast should not be over than specified upper limit of capacitors.

### 11. Adhesives, fixative and coating materials(coating agent)

① Do not use halogenated adhesives and coating materials to fix aluminum electrolytic capacitors.

②Do not cover up all the sealing area of capacitors with adhesives 、 fixative or coating materials(coating agent), make coverage only partial

### 12. Certificates

- ① ISO 9001:2015
- ② ISO 14001:2015
- ③ ISO/IATF 16949:2016
- ④ OHSAS 45001:2016

### ※ 符合 RoHS2.0 RoHS compliance

Accord with the latest standard of RoHS2.0, if customers have any special requirments, according to the relevant agreements which signed by both parts.
