## 1. General Specifications

4.3" is a color active matrix thin film transistor (TFT) TN liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. It is composed of a TFT LCD panel, Driver IC, FPC and Backlight.

| NO. | Item                           | Specification                    | Remark |

Note: The parameter is slightly changed by temperature, driving voltage and materiel

Note 1: The data are measured after LEDs are turned on for 3 minutes. LCM displays full white. The brightness is the average value of 5 measured spots. Measurement equipment BM-7 (Φ8mm)

Measuring condition:

- Measuring surroundings: Dark room.
- Measuring temperature:  $T_a = 25^\circ C$ .
- Adjust operating voltage to get optimum contrast at the center of the display.

The measured value is more than 3 minutes at the center point of the LCD panel, and the backlight is turned on at the same time.

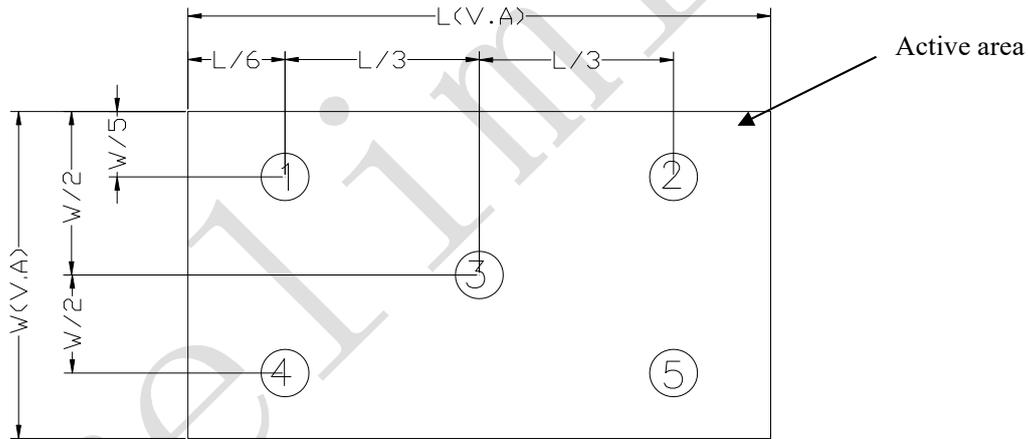

Note 2: The luminance uniformity is calculated by using following formula.

$$\Delta B_p = B_p (\text{Min.}) / B_p (\text{Max.}) \times 100 (\%)$$

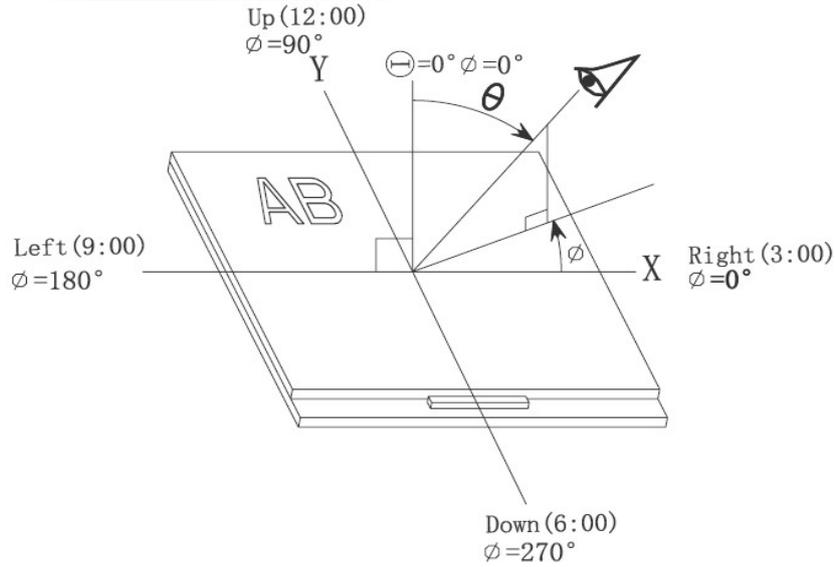

$B_p (\text{Max.})$  = Maximum brightness in 5 measured spots

$B_p (\text{Min.})$  = Minimum brightness in 5 measured spots.

Note 3: The definition of viewing angle:

Refer to the graph below marked by  $\theta$  and  $\phi$

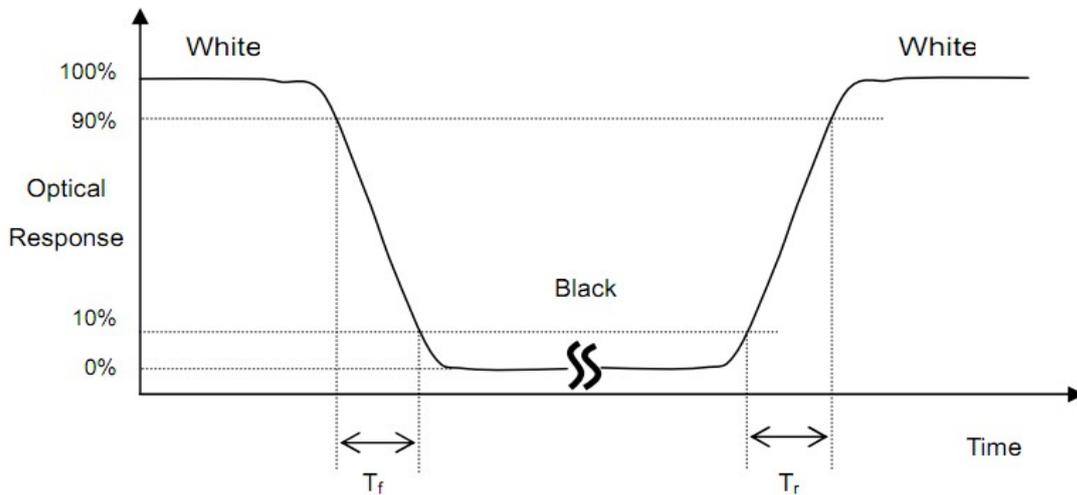

**Note 4: Definition of contrast ratio**

Contrast measurements shall be made at viewing angle of  $\theta = 0$  and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state.

$$CR = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$

**Note 5: Definition of Response time**

The output signals of photo detector are measured when the input signals are changed from “white” to “black”(Tf) and from “black” to “white”(Tr), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note1: Ta is the ambient temperature of samples.

Note2: Ts is the temperature of panel's surfaces.

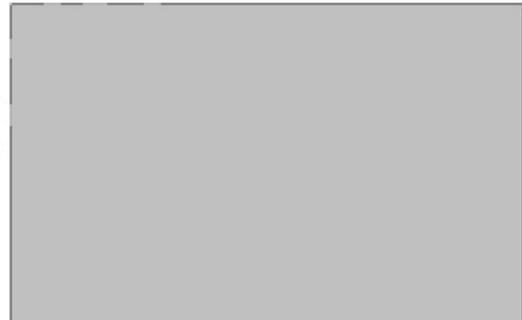

Note3: In the standard condition, there shall be no practical problem that may affect the display function. After the reliability test, the product only guarantees operation, but don't guarantee all of the cosmetic specification.

Note4: before cosmetic and function test, the product must have enough recovery time, at least 2 hours at room temperature.

Note5: Condition of image sticking test :25°C ±2°C , Operation with test pattern sustained for 30min's,then change to gray pattern immediately. After 5 min's, the Mura must be disappeared completely.
