

# Ledman Optoelectronic Co.,Ltd.

## SPECIFICATIONS FOR LEDMAN SMD LED

Model No. : LS-AOPB-BEN1-01  
Document No. : LMS-14-014  
Revision No. : 03

### Description:

- 3.5×2.8mm Top SMD
- Colloid Color: Water Transparent
- Emission Color: Blue
- Viewing Angle :120°

Dice Material: InGaN

Add: Building 8,Block 2,Baimang Baiwangxin Industrial Park, Xili Area,Nanshan District,Shenzhen, P.R.China

Tel: 86-755-86139688

Fax: 86-755-86139001

Model No.:	LS-AOPB-BEN1-01
Document No.:	LMS-14-014
Revision No.:	03

## Outline Drawing

- 1. Anode
- 2. Cathode

### NOTES:

All dimensions area in mm tolerance is  $\pm 0.05$ mm unless otherwise noted.

Model No.:	LS-AOPB-BEN1-01
Document No.:	LMS-14-014
Revision No.:	03

## Applications:

1	Indicators
2	Illuminations
3	LCD Back Lights
4	Automobile's Applications

## Absolute Maximum Ratings (Ta = 25°C)

Items	Symbol	Absolute maximum Rating	Unit
DC Forward Current	$I_F$	30	mA
Peak Forward Current*	$I_{FP}$	100	mA
Reverse Voltage	$V_R$	5	V
Power Dissipation	$P_D$	120	mW
Operation Temperature	$T_{opr}$	-20~ +75	°C
Storage Temperature	$T_{stg}$	-30 ~ +80	°C

\*pulse width  $\leq 0.1\text{msec}$  duty  $\leq 1/10$

## Typical Electrical & Optical Characteristics (Ta = 25°C)

Items	Symbol	Condition	Min.	Typ.	Max.	Unit
Forward Voltage	$V_F$	$I_F = 20\text{mA}$	---	3.2	3.6	V
Reverse Current	$I_R$	$V_R = 5\text{V}$	---	---	10	$\mu\text{A}$
Luminous Intensity	$I_V$	$I_F = 20\text{mA}$	220	280	---	mcd
Dominant Wavelength	$\lambda_D$	$I_F = 20\text{mA}$	465	470	475	nm
50% Power Angle	$2\theta_{\frac{1}{2}}$	$I_F = 20\text{mA}$	---	120	---	deg

### Important Notes:

- 1) All data will be included per delivery; rank ratio will be based on Dices distribution.
- 2) Tolerance of measurement of luminous intensity is  $\pm 10\%$ .
- 3) Tolerance of measurement of  $V_f$  is  $\pm 0.05\text{V}$ .
- 4) Tolerance of measurement of dominant wavelength is  $\pm 1\text{nm}$ .
- 5) Reliability test conditions Please refer to "Reliability Test" section on page 5.
- 6) How to use Ledman LED product safely ,Please refer to "Application Notes" section on page 7 to 9 .
- 7) Packaging methods are available for selection; please refer to "packing" section on page 10.
- 8) Specifications are subject to change without notice.

## Reliability Test Standards

Test item:

Type	Test item	Applicable standard	Test condition	Duration	Sampling number	Accept criteria
environment test	Temperature cycles	JEITA ED-4701 100 105	-40°C~25°C~100°C~25°C 30min 5min 30min 5min	100cycles	50	0/50
	Thermal shock	MIL-STD-202G	-40°C~100°C 15min 15min	300cycles	50	0/50
	High humidity heat cycles	JEITA ED-4701 200 203	30°C~65°C RH=90% 24hrs/1 cycle	50cycles	50	0/50
	High temperature storage	JEITA ED-4701 200 201	T <sub>a</sub> =100°C	1000hrs	50	0/50
	Low temperature storage	JEITA ED-4701 200 202	T <sub>a</sub> =-40°C	1000hrs	50	0/50
	High temperature & high humidity storage	JEITA ED-4701 100 103	T <sub>a</sub> =60°C RH=90%	1000hrs	50	0/50
life test	Normal temperature life test	/	T <sub>a</sub> =25°C I <sub>F</sub> =30mA(R,G,Y)/20mA(W,B)	1000hrs	50	0/50
	High temperature & high humidity life test	/	T <sub>a</sub> =60°C RH=90% I <sub>F</sub> =20mA(R,G,Y)/15mA(W,B)	1000hrs	50	0/50
	Low temperature life test	/	T <sub>a</sub> =-30°C I <sub>F</sub> =20mA(R,G,Y)/15mA(W,B)	1000hrs	50	0/50
	High temperature life test	/	T <sub>a</sub> =85°C I <sub>F</sub> =20mA(R,G,Y)/15mA(W,B)	1000hrs	50	0/50
destructive experiment	Resistance to soldering heat (Reflow soldering)	JEITA ED-4701 300 301	T <sub>sol</sub> =260°C, 10sec Pretreatment:30°C 70%RH 168hrs	2 times	10	0/10
	Solderability	/	T <sub>sol</sub> =235°C±5°C, 5sec using flux	one time	10	0/10
ESD	Electrostatic discharge test	JEITA ED-4701 300 304	Human body model 1000V forward and reverse	each 3 times	10	0/10
physical experiment	Vibration	JEITA ED-4701 400 403	20G 20-2000HZ 4mins X,Y,Z 3directions	each 4cycles	10	0/10
	Drop	/	75CM	3 times	10	0/10

Failure Criteria:

Item	Symbol	Test condition	Criteria for Judgment
Forward Voltage	V <sub>F</sub>	I <sub>F</sub> =20mA	Initial Data±10%
Reverse Current	I <sub>R</sub>	V <sub>R</sub> =5V	≦10μA
Luminous Intensity	I <sub>V</sub>	I <sub>R</sub> =20mA	Single led degradation ≦50% and Average degradation ≦30%
Solderability			Over 95%
Vibration		I <sub>F</sub> =20mA	No dead lamps or visual damage
Drop		I <sub>F</sub> =20mA	No dead lamps or visual damage

Remark: RH:Environment humidity; T<sub>a</sub>:Environment temperature;

T<sub>sol</sub>:Tin temperature; I<sub>F</sub>:Forward current; V<sub>R</sub>:Reverse voltage.

# Application Note Application Note

## Features

The purpose of this document is to provide a clear understanding to the customers and users, on the ways how to use our SMD lamps appropriately.

## Description

Generally, SMD can be used the same way as other general-purpose semiconductors. When using Ledman's SMD LED, the following precautions must be taken to protect the SMD.

### 1. Cleaning

- ✧ Don't use unspecified chemical liquids to clean the SMD LED; the chemical could harm the SMD LED. When washing is necessary, please immerse the SMD LED in alcohol at normal room temperature for less than 1 minute and dry at normal room temperature for 15 minutes before use.
- ✧ The influence of ultrasonic cleaning on the SMD LED depending on factors such as ultrasonic power and the way SMD LED are mounted. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the SMD LED.

### 2. Moisture Proof Packing

- ✧ In order to prevent moisture absorption into SMD LED during the transportation and storage, SMD LED is packed in a moisture barrier bag. Desiccants and a humidity indicator are packed together with SMD LED as the secondary protection. The indication of humidity indicator card provides the information of humidity within SMD packing.

### 3. Storage

- ✧ Shelf life in original sealed bag at storage condition of <math><40^{\circ}\text{C}</math> and <math><90\%RH</math> is 12 months. Baking is required whenever shelf life is expired.
- ✧ Before opening the packaging, Please check whether bag leak air or not.
- ✧ After bag opening, the SMD LED must be stored under the condition <math><30^{\circ}\text{C}</math> and <math><60\%RH</math>. Under this condition, SMD LED must be used (subject to reflow) within 24 hours after bag opening, and re-baking is required when exceeding 24 hours.
- ✧ For baking, place SMD LED in oven at temperature <math>70^{\circ}\text{C}\pm 5^{\circ}\text{C}</math> and relative humidity <math>\leq 10\%RH</math>, for 24 hours.
- ✧ Take out the material from packaging bag for re-bake. Do not open the door of oven frequently during the baking process.

## 4. Soldering

### . Manual soldering by soldering iron

- ✧ The use of a soldering iron of less than 25W is recommended and the temperature of the iron must be kept at below 315°C, with soldering time within 2 seconds.
- ✧ The epoxy resin of SMD LED should not be in contact with tip of soldering iron.
- ✧ No mechanical stress should be exerted on the resin portion of SMD LED during soldering.
- ✧ Handling of SMD LED should be done when the package has been cooled down to below 40°C or less. This is to prevent the SMD LED failures due to thermal-mechanical stress during handling.

### . Reflow Soldering

- ✧ The temperature (Top surface of SMD LED) profile is as below:

Solder = Sn63-Pb37	Solder = Lead-free
Average ramp-up rate = 4°C/s max.	Average ramp-up rate = 4°C/s max
Preheat temperature = 100°C ~150°C	Preheat temperature = 150°C ~200°C
Preheat time = 100s max.	Preheat time = 100s max.
Ramp-down rate = 6°C/s max.	Ramp-down rate = 6°C/s max.
Peak temperature = 230°C max.	Peak temperature = 250°C max.
Time within 5°C of actual Peak Temperature = 10s max.	Time within 5°C of actual Peak Temperature = 10s max.
Duration above 183°C is 80s max.	Duration above 217°C is 80s max.

Model No.:	LS-AOPB-BEN1-01
Document No.:	LMS-14-014
Revision No.:	03

- ◇ Recommended solder pad design for heat dissipation:

Note:  
Metal area at 1,2 should not be less than  $16\text{mm}^2$  each for sufficient heat dissipation.

- ◇ Modification is not recommended on SMD LED after soldering. If modification cannot be avoided, the modifications must be pre-qualified to avoid damaging SMD LED.
- ◇ Reflow soldering should not be done more than one time.
- ◇ No stress should be exerted on the package during soldering.
- ◇ PCB should not be wrapped after soldering; this is to allow natural cooling of the PCB board and SMD LED.

## 5. Electrostatic Discharge and Surge current

- ◇ Electrostatic discharge (ESD) or surge current (EOS) may damage SMD LED.
- ◇ Precautions such as ESD wrist strap, ESD shoe strap or antistatic gloves must be worn whenever handling of SMD LED.
- ◇ All devices, equipment and machinery must be properly grounded.
- ◇ It is recommended to perform electrical test to screen out ESD failures at final inspection.
- ◇ It is important to eliminate the possibility of surge current during circuitry design

## 6. Heat Management

Heat management of SMD LED must be taken into consideration during the design stage of SMD LED application. The current should be de-rated appropriately by referring to the de-rating curve attached on each product specification.

Model No.:	LS-AOPB-BEN1-01
Document No.:	LMS-14-014
Revision No.:	03

## Packaging

- ✧ The boxes are not water-resistant, and they must be kept away from water and moisture.
- ✧ The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- ✧ Cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation.
- ✧ The polyethylene bag back is applied in SMD LED.
- ✧ 2000+2(spare) pcs per reel.
- ✧ 10 reel per B carton.
- ✧ 20 reel per C carton
