Notes: \*1. Depends on connection conditions. Also, this does not guarantee repeated switching. We recommend that you confirm operation under actual conditions.

\*2. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.

\*3. The upper operation ambient temperature limit is the maximum temperature that can satisfy the coil temperature rise value. For details, please refer to the "Automotive Relay Users Guide".

Please inquire our sales representative if you will be using the relay in a high temperature atmosphere (110°C).

★ If the relay is used continuously for long periods of time with coils on both sides in an energized condition, breakdown might occur due to abnormal heating depending on the carrying condition. Therefore, please inquire our sales representative when using with a circuit that causes an energized condition on both sides simultaneously.

## GUIDELINES FOR USAGE

■ For general cautions for use, please refer to the "Automotive Relay Users Guide".

### ■ Precautions when using CJ relays

- Mounting and cleaning conditions for Pin in Paste compliant type

When soldering this relay, the following conditions should be observed.

[I.R.S method (recommended)]

(Recommended condition Number of reflow operation: 1 time)

#### 1) Cautions for mounting

- (1) The temperature profile shows the temperature at the soldering portion on the PC board surface.
- (2) Depending on the mounting density condition, reflow heating method and PC board type (metal etc.) the relay's exterior and interior temperature may become extremely high. Therefore, please confirm well under the actual use condition before use.

#### 2) The other cautions of reflow soldering

- (1) When soldering condition is out of recommendation, the relay performance may be adversely affected. If soldering conditions are out of our recommendation, please inquire our sales representative before operation.

- (2) Please check the effect at the actual soldering because heat stress to relay is changed by PC board type and manufacturing process condition.
- (3) Solder creepage, wettability or soldering strength will be affected by the mounting condition or soldering material. Please check the actual production condition in detail.
- (4) Do not wash the relay as failures may occur.
- (5) This product is not plastic sealed type. Please perform coating with sufficient attention to avoid infiltration of the solvent to the inside. Also, please pay careful attention to use and store them with no contamination of foreign material.

Please refer to **"the latest product specifications"** when designing your product.
