Tilt Sensor Switch

Item No.	RBS021002T	Description	Ball-Contact	Version	14
Page	2 of 7		Publish Date	Jun. 2	1, 2018

FEATURES

1. Suitable for horizontal PCB.

2. Switch state:

The RBS021002 acts like a normally closed switch which chatters open and closed as it is tilted or vibrated. Note that the RBS021002T is not guaranteed to be closed --- occasionally the sensing mechanism may remain open when at rest. The engineer should design his or her software to look for high-to-low and low-to-high edge transitions rather than an open or closed state of the switch.

- 3. Tiny size, suitable for small space.
- 4. Wing-shaped terminals, a feature enables half body of the sensor switch to be buried into PCB.
- 5. Gold-plated ball and terminals, low possibility of oxidization.
- 6. All plastic materials subject to industrial purpose, resist high temperature and meet fireproof function.
- 7. Simple ON and OFF signals, easy for design.
- 8. RoHS compliance, an ideal substitute for mercury switch.
- 9. A more economical tilt and rotation detection option than IC design solution.
- 10. All made in Taiwan and examined before shipment.

PATENTS

- 1. Taiwan Patent No. I 390563
- 2. Taiwan Patent No. 195196
- 3. U.S.A Patent No. US 7,829,804 B2

NOTES

- 1. Suggestion for usage: For vibration usage or application, we suggest to add hysteresis for IC; if vibration is heavy, optical type of sensor switch is recommended.
- For the continued product improvement as one of the company policy, specifications
 may change or update without notice. The latest information can be obtained
 through our sales offices. Normally, all products are supplied under our standard
 conditions.
- 3. If buyer's products will stay in power supply for a long time which needs very high stability, optical sensor switch is strongly recommended.

PRECAUTIONS FOR USE

- If the products is intended to be used for other endurance equipment requiring higher safety and reliability such as life support system, space and aviation devices, disaster and safety system, it's necessary to make verification of conformity or contact us for the details before using.
- Do not try to clean the switch with a solvent or similar substance after the soldering process.
- 3. Use water-soluble flux may damage the switch.
- 4. Please follow the soldering instruction accordingly, otherwise might lead to defective.
- 5. Do not use switch in the environment of high humidity, because such an environment may cause the leakage current between the terminals.
- 6. Please do not exceed the rated load as there will be a risk of disabling the product function.
- 7. In the circuit, switch should not be near or directly connected with the magnetic component solder joints (for example: relays, transformers, etc.).
- 8. Complete welding within 168 hours after unpacking, to avoid products humid which caused by prolonged exposure.
