

ARDUINO NANO CH340 V3.0

Product Description

The Arduino compatible Nano V3 development board is with the open original design schematics, free software interface, and also according to the needs and modifies the download process is simple and convenient. the development of the user interface and the environment is very simple, easy to understand, very suitable for beginners to learn.

Description:

Microcontroller : ATmega328
Operating Voltage (logic level) : 5v
Input Voltage (recommended) : 7-12v
Input Voltage (limits) : 6-20v
Digital I/O Pins : 14 (of which 6 provide PWM output)
Analog Input Pins : 8
DC Current per I/O Pin : 40mA
Flash Memory : 32 KB
SRAM : 2KB
EEPROM:1KB
Clock Speed:16 MHz
Dimensions: 18.5mm x 43.2mm
