PICKIT2 PICKIT3 Programming Burner Adapter

Product Description

Instructions for use:

Install the location of the microcontroller to write the reverse side of a detailed logo.

ICD2, KIT2, KIT3 through the 5Pin and programming block connection, programming programming.
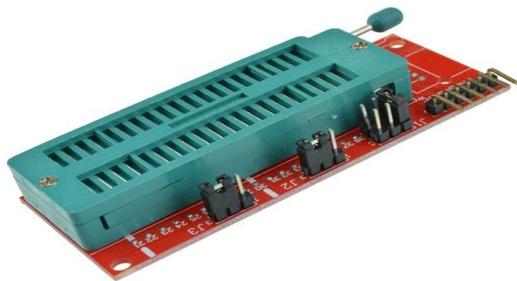

This programming block supports the following microcontrollers:

PIC16 / 18XX 40PIN Family Devices (Except 16F59)

PIC16 / 18XX 28PIN family of devices

PIC16 / 18XX 18PIN family of devices

PIC 8PIN / 14PIN / 20PIN family of devices

Description:

ICKIT2 is inexpensive PIC development tools.Support the IC is less than KIT3/ICD2, stability is better than ICD2, also off-line batch programming. KIT2 is a good choice for beginners.
Support for PICKIT2 IC, can be viewed MPLAB IDE v8.56 software.
Open the software, configure-> select device PICKIT2 support in front of the green light.

The simulation programmer with a protective function on the basis of the original increase of self-recovery fuse with three lights so you can clearly understand the current state of the programmer many similar products online, some indicator or offline programming functions eliminating the need to please buyers seriously comparison.
