TPS7B69xx-Q1 High-Voltage Ultra-Low I_Q Low-Dropout Regulator

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
  - Device Temperature Grade 1: –40°C to 125°C Ambient Operating Temperature Range
  - Device HBM ESD Classification Level 2
  - Device CDM ESD Classification Level C4B
- 4 to 40-V Wide V_I Input Voltage Range With up to 45-V Transient
- Maximum Output Current: 150 mA
- Low Quiescent Current (I_Q):
  - 15 µA Typical at Light Loads
  - 25 µA Maximum Under Full Temperature
- 450-mV Typical Low Dropout Voltage at 100 mA Load Current
- Stable With Low ESR Ceramic Output Capacitor (2.2 to 100 µF)
- Fixed 2.5-V, 3.3-V, and 5-V Output Voltage Options
- Integrated Fault Protection:
  - Thermal Shutdown
  - Short-Circuit Protection
- Packages:
  - 4-Pin SOT-223 Package
  - 5-Pin SOT-23 Package

2 Applications

- Automotive
- Infotainment Systems With Sleep Mode
- Always-On Battery Applications
  - Door Modules
  - Remote Keyless-Entry Systems
  - Immobilizers

3 Description

The TPS7B69xx-Q1 device is a low-dropout linear regulator designed for up to 40-V V_I operations. With only 15-µA (typical) quiescent current at light load, the device is suitable for standby microcontrol-unit systems especially in automotive applications.

The devices feature an integrated short-circuit and overcurrent protection. The TPS7B69xx-Q1 device operates over a –40°C to 125°C temperature range. Because of these features, the TPS7B6925-Q1, TPS7B6933-Q1, and TPS7B6950-Q1 devices are well suited in power supplies for various automotive applications.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS7B6925-Q1	SOT-223 (4)	6.50 mm × 3.50 mm
TPS7B6933-Q1 TPS7B6950-Q1	SOT-23 (5)	2.90 mm × 1.60 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

	4	4		
IN	1	1	P	Input power-supply voltage
NC	—	2	—	Not connected pin
OUT	3	5	P	Output voltage

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Unregulated input voltage	IN(2)(3)(4)	–0.3	45	V
Regulated output voltage	OUT(2)(3)	–0.3	7	V
Operating junction temperature range, T_J		–40	150	°C
Storage temperature, T_{stg}		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to the GND terminal.
(3) Absolute negative voltage on these pins must not to go below –0.3 V.
(4) Absolute maximum voltage, withstands 45 V for 200 ms.

7.2 ESD Ratings

				VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per AEC Q100-002(1)		±2000	V
		Charged device model (CDM), per AEC Q100-011	Other pins	±500	
			Corner pins (4 pin: 1, 3, and 4; 5 pin: 1, 3, 4, and 5)	±750	

(1) AEC Q100-002 indicates HBM stressing is done in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_I	Unregulated input voltage	4	40	V
V_O	Output voltage	0	5.5	V
C_O	Output capacitor requirements(1)	2.2	100	µF
ESR_{CO}	Output ESR requirements(2)	0.001	2	Ω
T_J	Operating junction temperature range	–40	150	°C

(1) The output capacitance range specified in this table is the effective value.
(2) Relevant ESR value at f = 10 kHz.

7.4 Thermal Information

THERMAL METRIC(1)(2)		DCY 4 PINS	DBV 5 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	64.2	210.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	46.8	126.1	
$R_{\theta JB}$	Junction-to-board thermal resistance	13.3	38.4	
ψ_{JT}	Junction-to-top characterization parameter	6.3	16	
ψ_{JB}	Junction-to-board characterization parameter	13.2	37.5	

(1) The thermal data is based on the JEDEC standard high-K profile, JESD 51-7, 2s2p four layer board with 2-oz copper. The copper pad is soldered to the thermal land pattern. Also correct attachment procedure must be incorporated.
(2) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

7.5 Electrical Characteristics

V_{IN} = 14 V, 1 mΩ < ESR < 2 Ω, T_J = –40°C to 150 °C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
SUPPLY VOLTAGE AND CURRENT (IN)						
V_I	Input voltage	Fixed 2.5-V output, I_O = 1 mA	4		40	V
		Fixed 3.3-V output, I_O = 1 mA	4		40	
		Fixed 5-V output, I_O = 1 mA	5.5		40	
I_Q	Quiescent current	Fixed 2.5-V and 3.3-V version, V_I = 4 to 40 V, Fixed 5-V version, V_I = 5.5 to 40 V, I_O = 0.2 mA		15	25	µA
$V_{IN(UVLO)}$	IN undervoltage detection	Ramp V_I up until the output turns on	3.65			V
		Ramp V_I down until the output turns OFF			3	
REGULATED OUTPUT (OUT)						
V_O	Regulated output	Fixed 2.5-V version, V_I = 4 to 40 V, I_O = 1 to 150 mA	–3%		3%	
		Fixed 3.3-V version, V_I = 5 to 40 V, I_O = 1 to 150 mA	–3%		3%	
		Fixed 5-V version, V_I = 6.5 to 40 V, I_O = 1 to 150 mA	–3%		3%	
$\Delta V_{O(\Delta VI)}$	Line regulation	V_I = 6 to 40 V, ΔV_O, I_O = 10 mA			10	mV
$\Delta V_{O(\Delta IL)}$	Load regulation	I_O = 1 to 150 mA, ΔV_O			20	mV
V_{DROP}	Dropout voltage	Fixed 2.5-V version, $V_I – V_O$, I_O = 50 mA			1.575	V
		Fixed 2.5-V version, $V_I – V_O$, I_O = 100 mA			1.575	
		Fixed 3.3-V version, $V_I – V_O$, I_O = 50 mA			799	mV
		Fixed 3.3-V version, $V_I – V_O$, I_O = 100 mA			800	
		Fixed 5-V version, $V_I – V_O$, I_O = 50 mA		220	400	
		Fixed 5-V version, $V_I – V_O$, I_O = 100 mA		450	800	
I_O	Output current	V_O in regulation	0		150	mA
I_{OCL}	Output current-limit	OUT short to ground	150		500	mA
PSRR	Power supply ripple rejection(1)	V_{rip} = 0.5 V_{pp}, Load = 10 mA, f = 100 Hz, C_O = 2.2 µF		60		dB
OPERATING TEMPERATURE RANGE						
T_{sd}	Junction shutdown temperature			175		°C
T_{hys}	Hysteresis of thermal shutdown			25		°C

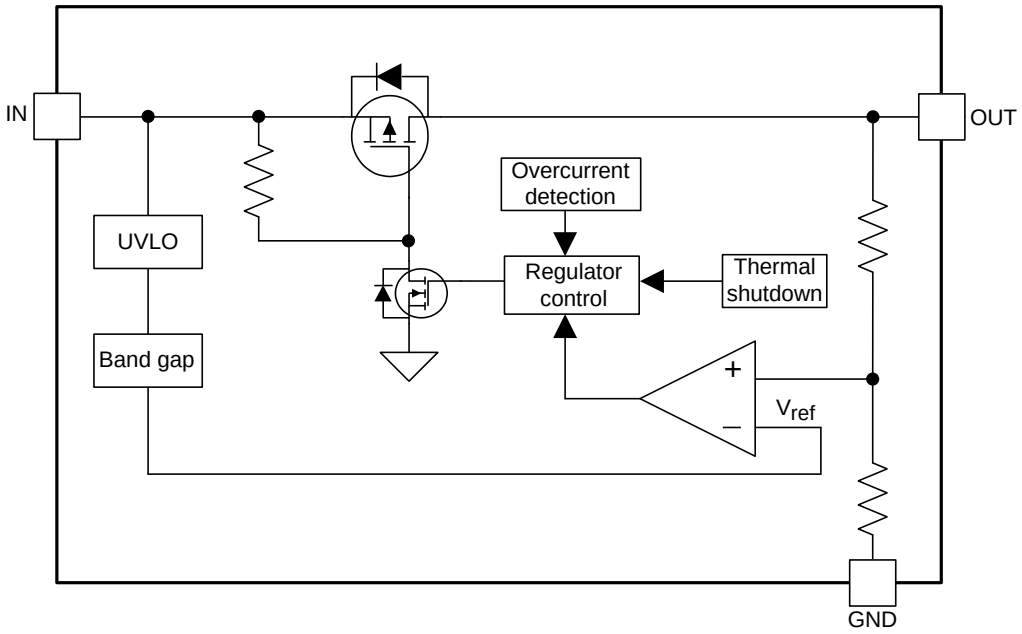
8 Detailed Description

8.1 Overview

The TPS7B69xx-Q1 high-voltage linear regulator operates over a 4-V to 40-V input voltage range. The device has an output current capability of 150 mA and offers fixed output voltages of 2.5 V (TPS7B6925-Q1), 3.3 V (TPS7B6933-Q1) or 5 V (TPS7B6950-Q1). The device features a thermal shutdown and short-circuit protection to prevent damage during over-temperature and overcurrent conditions.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Input (IN)

The IN pin is a high-voltage-tolerant pin. A capacitor with a value higher than 0.1 µF is recommended to be connected close to this pin to better the transient performance.

8.3.2 Output (OUT)

The OUT pin is the regulated output based on the required voltage. The output has current limitation. During the initial power up, the regulator has a soft start incorporated to control the initial current through the pass element and the output capacitor.

In the event that the regulator drops out of regulation, the output tracks the input minus a drop based on the load current. When the input voltage drops below the UVLO threshold, the regulator shuts down until the input voltage recovers above the minimum startup level.

8.3.3 Output Capacitor Selection

For stable operation over the full temperature range and with load currents up to 150 mA, use a capacitor with an effective value between 2.2 µF and 100 µF and ESR smaller than 2 Ω. To better the load transient performance, an output capacitor, such as a ceramic capacitor with low ESR, is recommended.

8.3.4 Low-Voltage Tracking

At low input voltages, the regulator drops out of regulation and the output voltage tracks input minus a voltage based on the load current (I_L) and switch resistor. This tracking allows for a smaller input capacitor and can possibly eliminate the need for a boost converter during cold-crank conditions.

Feature Description (continued)

8.3.5 Thermal Shutdown

The TPS7B69xx-Q1 family of devices incorporates a thermal-shutdown (TSD) circuit as a protection from overheating. For continuous normal operation, the junction temperature should not exceed the TSD trip point. If the junction temperature exceeds the TSD trip point, the output turns off. When the junction temperature falls below the TSD trip point minus the hysteresis of TSD, the output turns on again. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

The purpose of the design of the internal protection circuitry of the TPS7B69xx-Q1 family of devices is for protection against overload conditions, not as a replacement for proper heat-sinking. Continuously running the TPS7B69xx-Q1 family of devices into thermal shutdown degrades device reliability.

8.4 Device Functional Modes

8.4.1 Operation With V_I Less Than 4 V

The TPS7B69xx-Q1 family of devices operates with input voltages above 4 V. The maximum UVLO voltage is 3 V and the device operates at an input voltage above 4 V. The device can also operate at lower input voltages; no minimum UVLO voltage is specified. At input voltages below the actual UVLO, the device shuts down.

8.4.2 Operation With V_I Greater Than 4 V

When V_I is greater than 4 V, if the input voltage is higher than V_O plus the dropout voltage, the output voltage is equal to the set value. Otherwise, the output voltage is equal to V_I minus the dropout voltage.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TPS7B69xx-Q1 family of devices is a 150-mA low-dropout linear regulator designed for up to 40-V V_I operation with only 15-µA quiescent current at light loads. Use the PSpice transient model to evaluate the base function of the device. To download the PSpice transient model, go to the device product folder on www.TI.com. In addition to this model, specific evaluation modules (EVM) are available for these devices. For the EVM and the EVM user guide, go to the device product folder.

9.2 Typical Application

Figure 25 shows the typical application circuit for the TPS7B69xx-Q1 family of devices. Based on the end-application, different values of external components can be used. An application can require a larger output capacitor during fast load steps to achieve better load transient response. TI recommends a low-ESR ceramic capacitor with a dielectric of type X5R or X7R for better load transient response.

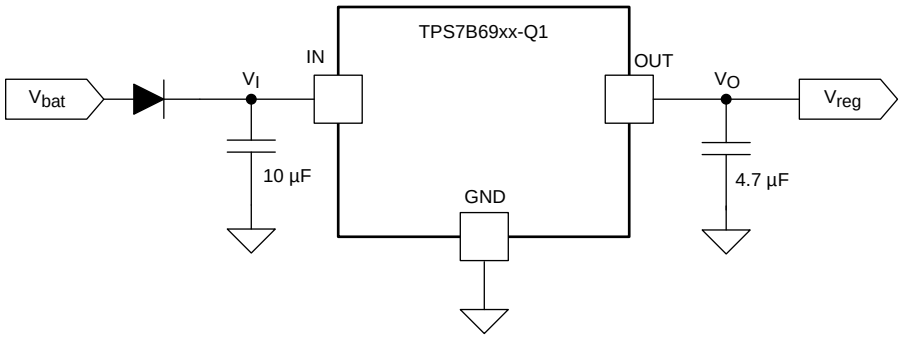


Figure 25. Typical Application Schematic for TPS7B69xx-Q1

9.2.1 Design Requirements

For this design example, use the parameters listed in Table 1.

Table 1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUES
Input voltage range	4 to 40 V
Output voltage	2.5 V, 3.3 V, 5 V
Output current rating	150 mA
Output capacitor range	2.2 to 100 µF
Output capacitor ESR range	1 mΩ to 2 Ω

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
- Output Voltage
- Output current rating

9.2.2.1 Input Capacitor

The device requires an input decoupling capacitor, the value of which depends on the application. The typical recommend value for the decoupling capacitor is higher than 0.1 µF. The voltage rating must be greater than the maximum input voltage.

9.2.2.2 Output Capacitor

The device requires an output capacitor to stabilize the output voltage. The output capacitor value should be between 2.2 µF and 100 µF. The ESR value range should be between 1 mΩ and 2 Ω. TI recommends a ceramic capacitor with low ESR to improve the load transient response.

9.2.2.3 Power Dissipation and Thermal Considerations

Use Equation 1 to calculate the power dissipated in the device.

$$P_D = I_O \times (V_I - V_O) + I_Q \times V_I \quad (1)$$

where

- P_D = continuous power dissipation
- I_O = output current
- V_I = input voltage
- V_O = output voltage

Because I_Q « I_O, the term $I_Q \times V_I$ in Equation 1 can be ignored.

For a device under operation at a given ambient air temperature (T_A), use Equation 2 to calculate the junction temperature (T_J).

$$T_J = T_A + (Z_{\theta JA} \times P_D) \quad (2)$$

where

- $Z_{\theta JA}$ = junction-to-ambient air thermal impedance

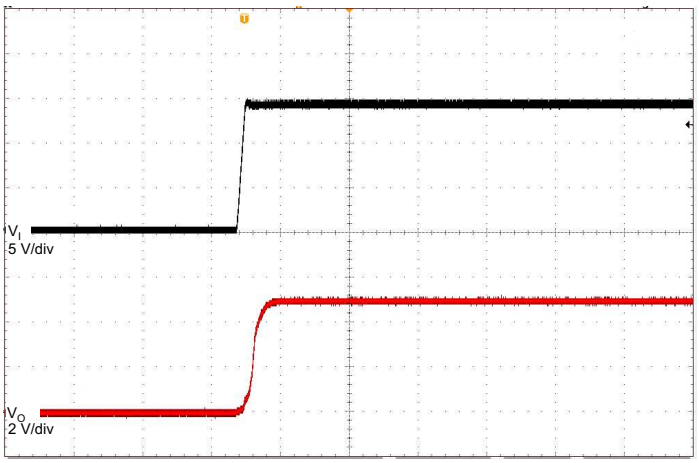
Use Equation 3 to calculate the rise in junction temperature because of power dissipation.

$$\Delta T = T_J - T_A = (Z_{\theta JA} \times P_D) \quad (3)$$

For a given maximum junction temperature (T_{Jmax}), use Equation 4 to calculate the maximum ambient air temperature (T_{Amax}) at which the device can operate.

$$T_{Amax} = T_{Jmax} - (Z_{\theta JA} \times P_D) \quad (4)$$

9.2.3 Application Curve



C_O = 2.2 µF, 400 µs/div

Figure 26. Power Up (5 V)

10 Power Supply Recommendations

The device is designed to operate from an input-voltage supply range between 4 V and 40 V. This input supply must be well regulated. If the input supply is located more than a few inches from the TPS7B69xx-Q1 device, TI recommends adding an electrolytic capacitor with a value of 10 µF and a ceramic bypass capacitor at the input.

11 Layout

11.1 Layout Guidelines

For the layout of TPS7B69xx-Q1 family of devices, place the input and output capacitors close to the devices as shown in Figure 27 and Figure 28. To enhance the thermal performance, TI recommends surrounding the device with some vias.

Minimize equivalent series inductance (ESL) and ESR to maximize performance and ensure stability. Place every capacitor as close as possible to the device and on the same side of the PCB as the regulator.

Do not place any of the capacitors on the opposite side of the PCB from where the regulator is installed. TI strongly discourages the use of long traces because they can impact system performance negatively and even cause instability.

If possible, and to ensure the maximum performance specified in this product data sheet, use the same layout pattern used for the TPS7B69xx-Q1 evaluation board.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

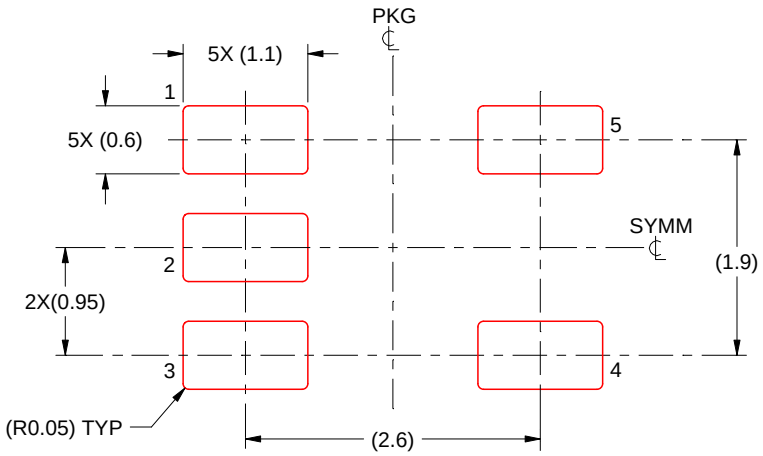
NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

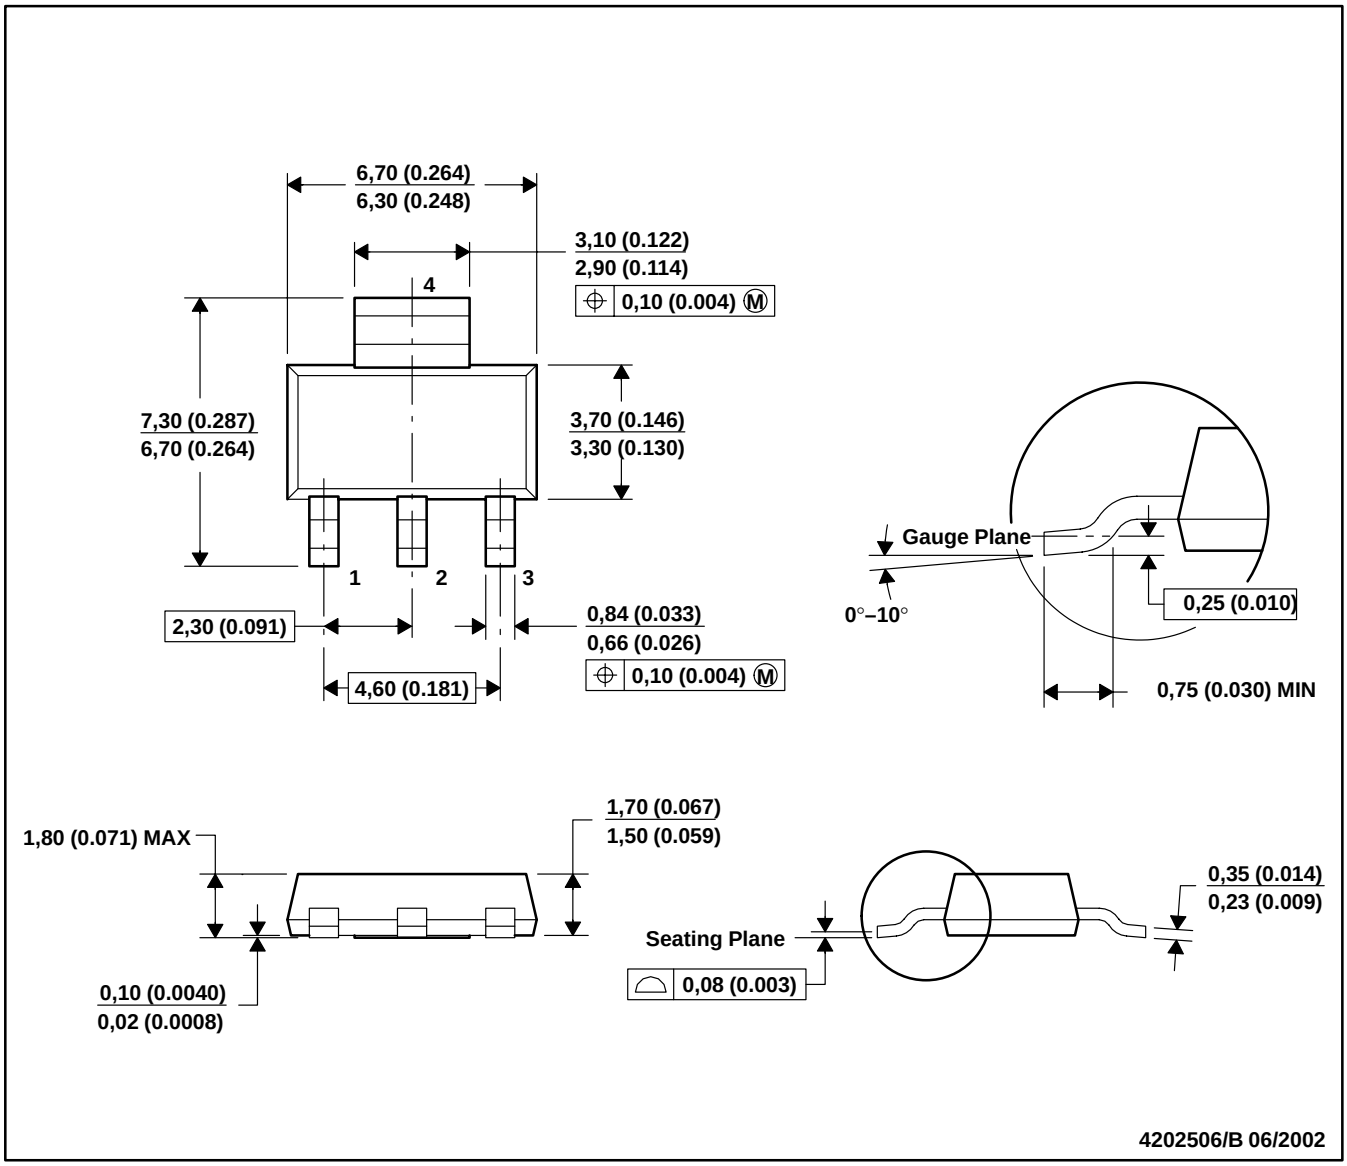
4214839/E 09/2019

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

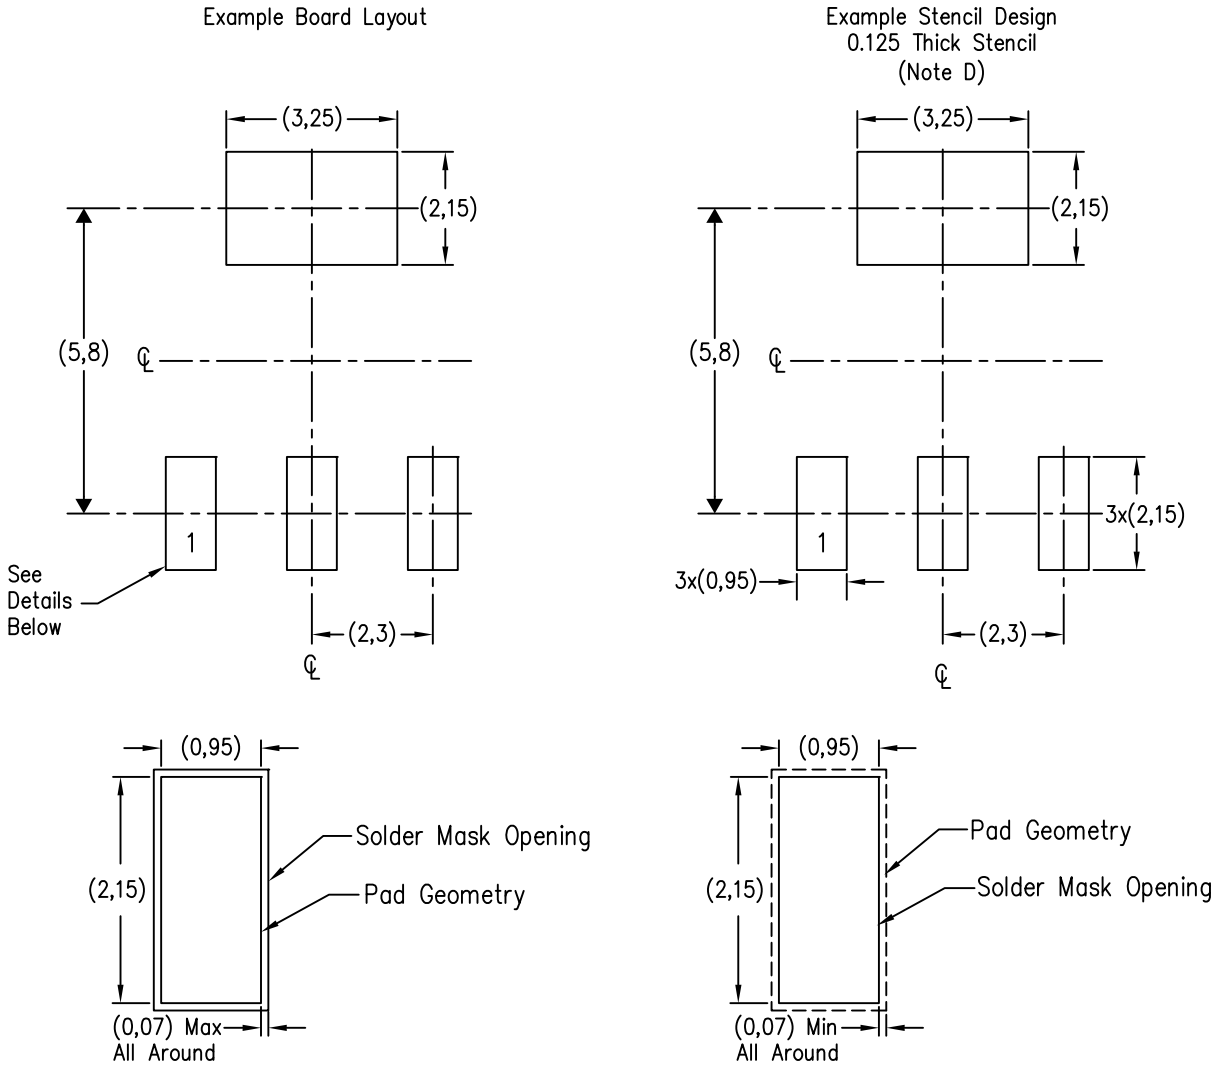
MPDS094A – APRIL 2001 – REVISED JUNE 2002

DCY (R-PDSO-G4) **PLASTIC SMALL-OUTLINE**



NOTES: A. All linear dimensions are in millimeters (inches).
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion.
D. Falls within JEDEC TO-261 Variation AA.

DCY (R–PDSO–G4) PLASTIC SMALL OUTLINE



NOTES:

A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil recommendations. Refer to IPC 7525 for stencil design considerations.
