## TS5A23159 1- $\Omega$ 2-Channel SPDT Analog Switch 5-V / 3.3-V 2-Channel 2:1 Multiplexer / Demultiplexer

## 1 Features

- Isolation in Power-Down Mode, $\mathrm{V}_{\mathrm{CC}}=0$
- Specified Break-Before-Make Switching
- Low ON-State Resistance (1 $\Omega$ )
- Control Inputs are 5.5-V Tolerant
- Low Charge Injection
- Excellent ON-State Resistance Matching
- Low Total Harmonic Distortion (THD)
- Supports Analog and Digital Signals
- $1.65-\mathrm{V}$ to $5.5-\mathrm{V}$ Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
- 2000-V Human Body Model (A114-B, Class II)
- 1000-V Charged-Device Model (C101)

## 2 Applications

- Cell Phones
- PDAs
- Portable Instrumentation
- Audio and Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Communication Circuits
- Modems
- Hard Drives
- Computer Peripherals
- Wireless Terminals and Peripherals

## 3 Description

The TS5A23159 is a bidirectional 2-channel singlepole double-throw (SPDT) switch that is designed to operate from 1.65 V to 5.5 V . The device offers low ON-state resistance and excellent ON-state resistance matching with the break-before-make feature which prevents signal distortion during the transferring of a signal from one channel to another. The device has an excellent total harmonic distortion (THD) performance and consumes very low power. These features make this device suitable for a wide variety of portable applications including cell phones, audio devices, and instrumentation.

| Device Information $^{(1)}$ |  |  |
| :---: | :--- | :---: |
| PART NUMBER PACKAGE | BODY SIZE (NOM) |  |
| TS5A23159 | VSSOP (10) | $3.00 \mathrm{~mm} \times 3.00 \mathrm{~mm}$ |
|  | UQFN (10) | $1.50 \mathrm{~mm} \times 2.00 \mathrm{~mm}$ |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

4 Revision History
NOTE: Page numbers for previous revisions may differ from page numbers in the current version.
Changes from Revision G (August 2013) to Revision H Page

- Added ESD Ratings table, Recommended Operating Conditions table, Thermal Information table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section ..... 1
Changes from Revision F (September 2010) to Revision G Page
- Aligned package description throughout datasheet ..... 1
- Removed Ordering Information table. ..... 1

## 5 Pin Configuration and Functions

Pin Functions

| PIN |  | I/O |  |
| :---: | :---: | :---: | :--- |
| NO. | NAME |  |  |
| 1 | IN1 | I | Digital control to connect COM to NO or NC |
| 2 | NO1 | I/O | Normally open |
| 3 | GND | - | Ground |
| 4 | NO2 | I/O | Normally open |
| 5 | IN2 | I | Digital control to connect COM to NO or NC |
| 6 | COM2 | I/O | Common |
| 7 | NC2 | I/O | Normally closed |
| 8 | VCC | - | Power supply |
| 9 | NC1 | I/O | Normally closed |
| 10 | COM1 | I/O | Common |

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ${ }^{(1)(2)}$

|  |  |  | MIN | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CC}}$ | Supply voltage ${ }^{(3)}$ |  | -0.5 | 6.5 | V |
| $V_{\mathrm{NC}}$ <br> $\mathrm{V}_{\mathrm{NO}}$ <br> $\mathrm{V}_{\mathrm{COM}}$ | Analog voltage ${ }^{(3)(4)(5)}$ |  | -0.5 | $V_{C C}+0.5$ | V |
| $\mathrm{I}_{\mathrm{K}}$ | Analog port diode current | $\mathrm{V}_{\mathrm{NC}}, \mathrm{V}_{\mathrm{NO}}, \mathrm{V}_{\mathrm{COM}}<0$ | -50 |  | mA |
| $\mathrm{I}_{\text {NC }}$ | On-state switch current |  | -200 | 200 |  |
| $\begin{aligned} & 1 \mathrm{NO} \\ & \mathrm{I}_{\mathrm{COM}} \end{aligned}$ | On-state peak switch current ${ }^{(6)}$ | $\mathrm{V}_{\mathrm{NC}}, \mathrm{V}_{\mathrm{NO}}, \mathrm{V}_{\mathrm{COM}}=0$ to $\mathrm{V}_{\mathrm{CC}}$ | -400 | 400 | mA |
| $\mathrm{V}_{\text {IN }}$ | Digital input voltage ${ }^{(3)}$ (4) |  | -0.5 | 6.5 | V |
| $\mathrm{I}_{\text {IK }}$ | Digital input clamp current | $\mathrm{V}_{1}<0$ | -50 |  | mA |
| $\mathrm{I}_{\mathrm{CC}}$ | Continuous current through $\mathrm{V}_{\text {CC }}$ |  |  | 100 | mA |
| $\mathrm{I}_{\text {GND }}$ | Continuous current through GND |  | -100 | 100 | mA |
| $\mathrm{T}_{\text {stg }}$ | Storage temperature |  | -65 | 150 | ${ }^{\circ} \mathrm{C}$ |

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
(3) All voltages are with respect to ground, unless otherwise specified.
(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
(5) This value is limited to 5.5 V maximum.
(6) Pulse at $1-\mathrm{ms}$ duration $<10 \%$ duty cycle

### 6.2 ESD Ratings

|  |  | VALUE | UNIT |
| :---: | :---: | :---: | :---: |
|  | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ${ }^{(1)}$ | $\pm 2000$ |  |
| $\mathrm{V}_{(\text {ESD })}$ Electrostatic discharge | Charged-device model (CDM), per JEDEC specification JESD22C101 ${ }^{(2)}$ | $\pm 1000$ | V |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

|  |  | MIN | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CC}}$ | Supply LC Voltage | 0 | 5.5 | V |
| $\begin{aligned} & \mathrm{V}_{\mathrm{NC}} \\ & \mathrm{~V}_{\mathrm{NO}} \\ & \mathrm{~V}_{\mathrm{COM}} \\ & \hline \end{aligned}$ | Analog voltage | 0 | $\mathrm{V}_{\mathrm{CC}}$ |  |
| $\mathrm{V}_{\text {IN }}$ | Digital input voltage range | 0 | $\mathrm{V}_{\mathrm{Cc}}$ |  |

### 6.4 Thermal Information

| THERMAL METRIC ${ }^{(1)}$ |  | TS5A23159 |  | UNIT |
| :---: | :---: | :---: | :---: | :---: |
|  |  | DGS (VSSOP) | RSE (UQFN) |  |
|  |  | 10 PINS | 10 PINS |  |
| $\mathrm{R}_{\text {өJA }}$ | Junction-to-ambient thermal resistance | 203.9 | 180.8 | ${ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| $\mathrm{R}_{\text {өJC(top) }}$ | Junction-to-case (top) thermal resistance | 88.3 | 117.8 |  |
| $\mathrm{R}_{\text {өJB }}$ | Junction-to-board thermal resistance | 123.9 | 98.6 |  |
| $\Psi_{J T}$ | Junction-to-top characterization parameter | 2.1 | 6.8 |  |
| $\Psi_{\text {JB }}$ | Junction-to-board characterization parameter | 122.5 | 98.4 |  |
| $\mathrm{R}_{\text {өJC(bot) }}$ | Junction-to-case (bottom) thermal resistance | - | - |  |

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

(1) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
(2) All unused digital inputs of the device must be held at $\mathrm{V}_{\mathrm{CC}}$ or GND to ensure proper device operation. Refer to the Tl application report, Implications of Slow or Floating CMOS Inputs, SCBA004.

## Electrical Characteristics for 5-V Supply (continued)

$\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V}$ to $5.5 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ (unless otherwise noted) ${ }^{(1)}$

TS5A23159

## Parameter Measurement Information (continued)

Table 1. Parameter Description

| SYMBOL | DESCRIPTION |
| :---: | :---: |
| $\mathrm{V}_{\text {Com }}$ | Voltage at COM |
| $\mathrm{V}_{\mathrm{NC}}$ | Voltage at NC |
| $\mathrm{V}_{\mathrm{NO}}$ | Voltage at NO |
| $\mathrm{R}_{\text {on }}$ | Resistance between COM and NC or COM and NO ports when the channel is ON |
| $\mathrm{R}_{\text {peak }}$ | Peak on-state resistance over a specified voltage range |
| $\Delta \mathrm{R}_{\text {on }}$ | Difference of $\mathrm{R}_{\text {on }}$ between channels in a specific device |
| $\mathrm{R}_{\text {on(flat) }}$ | Difference between the maximum and minimum value of $\mathrm{R}_{\text {on }}$ in a channel over the specified range of conditions |
| $\mathrm{I}_{\text {NC(OFF) }}$ | Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state under worstcase input and output conditions |
| $\mathrm{I}_{\text {NC(PWROFF) }}$ | Leakage current measured at the NC port during the power-down condition, $\mathrm{V}_{\mathrm{CC}}=0$ |
| $\mathrm{I}_{\text {NO(OFF) }}$ | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state under worstcase input and output conditions |
| $\mathrm{I}_{\text {No(PWROFF) }}$ | Leakage current measured at the NO port during the power-down condition, $\mathrm{V}_{\mathrm{CC}}=0$ |
| $\mathrm{I}_{\mathrm{NC} \text { (ON) }}$ | Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open |
| $\mathrm{I}_{\mathrm{NO}(\mathrm{ON})}$ | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open |
| $\mathrm{I}_{\text {COM(ON }}$ | Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the ON state and the output ( NC or NO ) open |
| $\mathrm{I}_{\text {COM(PWROFF) }}$ | Leakage current measured at the COM port during the power-down condition, $\mathrm{V}_{\mathrm{CC}}=0$ |
| $\mathrm{V}_{\mathrm{IH}}$ | Minimum input voltage for logic high for the control input (IN) |
| $\mathrm{V}_{\mathrm{IL}}$ | Maximum input voltage for logic low for the control input (IN) |
| $\mathrm{V}_{\text {IN }}$ | Voltage at the control input (IN) |
| $\mathrm{I}_{\text {IH }}, \mathrm{I}_{\text {IL }}$ | Leakage current measured at the control input (IN) |
| ton | Turnon time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM, NC, or NO) signal when the switch is turning ON. |
| toff | Turnoff time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control ( IN ) signal and analog output (COM, NC, or NO) signal when the switch is turning OFF. |
| $t_{\text {BBM }}$ | Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels ( NC and NO ) when the control signal changes state. |
| $\mathrm{Q}_{\mathrm{C}}$ | Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NO or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $\mathrm{Q}_{\mathrm{C}}=\mathrm{C}_{\mathrm{L}} \times \Delta \mathrm{V}_{\text {COM }}$. $\mathrm{C}_{\mathrm{L}}$ is the load capacitance and $\Delta \mathrm{V}_{\mathrm{COM}}$ is the change in analog output voltage. |
| $\mathrm{C}_{\text {NC(OFF) }}$ | Capacitance at the NC port when the corresponding channel (NC to COM) is OFF |
| $\mathrm{C}_{\mathrm{NO} \text { (OFF) }}$ | Capacitance at the NO port when the corresponding channel (NO to COM) is OFF |
| $\mathrm{C}_{\mathrm{NC} \text { (ON) }}$ | Capacitance at the NC port when the corresponding channel (NC to COM) is ON |
| $\mathrm{C}_{\mathrm{NO} \text { (ON) }}$ | Capacitance at the NO port when the corresponding channel (NO to COM) is ON |
| $\mathrm{C}_{\text {COM(ON) }}$ | Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is ON |
| $\mathrm{Cl}_{1}$ | Capacitance of control input (IN) |
| OISo | OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel ( NC to COM or NO to COM) in the OFF state. |
| $\mathrm{X}_{\text {TALK }}$ | Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured in a specific frequency and in dB. |
| BW | Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB below the DC gain. |
| THD | Total harmonic distortion is defined as the ratio of the root mean square (RMS) value of the second, third, and higher harmonics to the magnitude of fundamental harmonic. |
| ICC | Static power-supply current with the control (IN) pin at $\mathrm{V}_{C C}$ or GND |

## 8 Detailed Description

### 8.1 Overview

The TS5A23159 is a bidirectional 2-channel single-pole double-throw (SPDT) switch that is designed to operate from 1.65 V to 5.5 V . The device offers low ON -state resistance and excellent ON -state resistance matching with the break-before-make feature which prevents signal distortion during the transferring of a signal from one channel to another. The device has an excellent total harmonic distortion (THD) performance and consumes very low power. These features make this device suitable for a wide variety of portable applications including cell phones, audio devices, and instrumentation.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The TS5A23159 is a bidirectional device that has two single-pole, double-throw switches. The two channels of the switch are contorled independantly by two digital signals; one digital control for each single-pole, doublethrow switch.

### 8.4 Device Functional Modes

Table 2. Function Table

| IN | NC to COM, <br> COM to NC | NO to COM, <br> COM to NO |
| :---: | :---: | :---: |
| L | ON | OFF |
| $H$ | OFF | ON |

## 9 Application and Implementation

## NOTE

Information in the following applications sections is not part of the Tl component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The switches are bidirectional, so the NO, NC, and COM pins can be used as either inputs or outputs.

### 9.2 Typical Application

Figure 25. Typical Application Diagram

### 9.2.1 Design Requirements

Ensure that all of the signals passing through the switch are within the specified ranges in the recommended operating conditions to ensure proper performance.

### 9.2.2 Detailed Design Procedure

The TS5A23159 can be properly operated without any external components. However, Tl recommends connecting unused pins to ground through a $50-\Omega$ resistor to prevent signal reflections back into the device. Tl also recommends that the digital control pins (INX) be pulled up to VCC or down to GND to avoid undesired switch positions that could result from the floating pin.

## Typical Application (continued)

### 9.2.3 Application Curve

Figure 26. $\mathrm{R}_{\mathrm{on}}$ vs $\mathrm{V}_{\mathrm{com}}\left(\mathrm{V}_{\mathrm{cc}}=5 \mathrm{~V}\right)$

## 10 Power Supply Recommendations

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the device. Always sequence VCC on first, followed by NO, NC, or COM. Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the VCC supply to other components. A $0.1-\mu \mathrm{F}$ capacitor, connected from VCC to GND, is adequate for most applications.

## 11 Layout

### 11.1 Layout Guidelines

High-speed switches require proper layout and design procedures for optimum performance. Reduce stray inductance and capacitance by keeping traces short and wide. Ensure that bypass capacitors are as close to the device as possible. Use large ground planes where possible.

### 11.2 Layout Example

Figure 27. Layout Recommendation

## 12 Device and Documentation Support

### 12.1 Trademarks

All trademarks are the property of their respective owners.

### 12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.3 Glossary

SLYZ022 - TI Glossary.
This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

| Orderable Device | Status <br> (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan <br> (2) | Lead/Ball Finish <br> (6) | MSL Peak Temp <br> (3) | Op Temp ( ${ }^{\circ} \mathrm{C}$ ) | Device Marking $(4 / 5)$ | Samples |

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but Tl does not recommend using this part in a new design
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. Tl may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the $<=1000 \mathrm{ppm}$ threshold requirement.
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided.
