## DESCRIPTION

PT2260 is a remote control encoder paired with either PT2270 or PT2272 utilizing CMOS Technology．It encodes data and address pins into a serial coded waveform suitable for RF modulation．PT2260 has a maximum of 10 bits tri－state address pins providing up to 59,049 （or $3^{10}$ ）address codes；thereby，drastically reducing any code collision and unauthorized code scanning possibilities．

PT2260 is one of the first generation of Encoder／Decoder ICs that utilizes the unique PTC Technology．When paired with PT2270，this encoder／decoder（PT2260／PT2270）pair can operate at very wide temperature range（see Features）．Thus， this very important feature enables your Encoder／Decoder to operate under the worst environmental condition．

## FEATURES

－High performance CMOS technology
－Low power consumption
－Very high noise immunity
－Wide operating temperature range：$-40^{\circ} \mathrm{C} \sim 85^{\circ} \mathrm{C}$
－ 8 or 10 Tri－State code address pins
－ 2 or 4 data pins
－Wider range of operating voltage： $1.8 \sim 10.0 \mathrm{~V}$
－Single resistor oscillator
－Least external components

## APPLICATIONS

－Home／Car security system
－Garage door controller
－Remote fan controller
－Remote control toys

BLOCK DIAGRAM

## APPLICATION CIRCUIT

UHF Band 4－Data Transmitter Circuit is recommended．

## ORDER INFORMATION

| Valid Part Number | Package Type | Top Code |
| :---: | :---: | :---: |
| PT2260－R2 | 16 Pins，DIP，300mil | PT2260－R2 |
| PT2260－R2S | 16 Pins，SOP，150mil | PT2260－R2S |
| PT2260－R4S | 16 Pins，SOP，150mil | PT2260－R4S |

Notes：
1．R：RF Application．
2．2： 2 Data Pins；4： 4 Data Pins．

PT2260－R2
PT2260－R2S

## PIN DESCRIPTION

| Pin Name | 1／0 | Description | Pin No． |
| :---: | :---: | :---: | :---: |
| A0～A7 | । | Code Address Pin Nos． $0 \sim 7$ <br> These eight tri－state pins are detected by PT2260 to determine the encoded waveform bit $0 \sim$ bit 7 ．Each bit can be set to＂ 0 ＂，＂ 1 ＂，or＂$f$＂ （floating）． | $1 \sim 8$ |
| A8／D3～A9／D2 | I／PL＊ | Code Address Pin No． 8 ～9／Data Pin No． $3 \sim 2$. <br> These two tri－state pins are detected by PT2260 to determine the encoded waveform bit $8 \sim$ bit 9 ．When these pins are used as address pins（as in PT2260－R2），they can be set to＂ 0 ＂，＂ 1 ＂，or＂$f$＂ （floating）．When these pins are used as data pins（as in PT2260－R4），they can only be set to＂ 0 ＂or＂ 1 ＂． | $10 \sim 11$ |
| D1，D0 | I／PL | Data Pin No．1／0． <br> These pins can only be set to＂ 0 ＂or＂ 1 ＂ | 12， 13 |
| OSC | 1 | Oscillator Pin <br> A resistor connected between the Osc Pin and the Vcc determines the fundamental frequency of the PT2260 | 14 |
| DOUT | 0 | Data Output Pin． <br> The encoded waveform is serially outputted to this pin．When PT2260 is not transmitting，DOUT outputs low（Vss）voltage | 15 |
| Vcc |  | Positive Power Supply | 16 |
| Vss |  | Negative Power Supply | 9 |

## Note：

PL－－Pull－low Resistor is connected internally
PL＊－－If those two pins are used as Data Pins（PT2260－R2），pull－low resistor is connected internally；otherwise，no pull－low resistor is connected．

## FUNCTION DESCRIPTION

PT2260 encodes the code address and data set at A0～A7，A8／D3，A9／D2，D1 and D0 into a special waveform and outputs it to the DOUT when any of the data pins is tied to high．This waveform is fed to the RF modulator for transmission．The transmitted radio frequency is received by the RF demodulator and reshaped into the special waveform．PT2270（or PT2272）is then used to decode the waveform and set the corresponding output pin（s）．Thus completing a remote control encoding and decoding function．

## RF OPERATION

## CODE BITS

A Code Bit is the basic component of the encoded waveform，and can be classified as either an AD（Address／Data）Bit or a SYNC（Synchronous）Bit．

## Address／Data（AD）Bit Waveform

An AD Bit can be designated as Bit＂ 0 ＂，＂ 1 ＂，or＂ f ＂if it is in low，high or floating state respectively．One bit waveform consists of 2 pulse cycles．Each pulse cycle has 512 oscillating clock periods．For further details，please refer to the diagram below：

where：$\alpha=$ Oscillating Clock Period
Synchronous（Sync．）Bit Waveform
The Synchronous Bit Waveform is 4 bits long with $1 / 8$ bit width pulse．Please refer to the diagram below：

Note： 1 bit＝1024 $\alpha$

## CODE WORD

A group of Code Bits is called a Code Word．A Code Word consists of 12 AD bits followed by one Sync．Bit．The 12 AD bits are determined by the corresponding states of $A 0 \sim A 7, A 8 / D 3, A 9 / D 2, D 1$ and $D 0$ pins at the time of transmission．When the Data Type of PT2260 is used，the address bits will decrease accordingly．

For example：In the 4－Data Type where the address has eight（8）bits，the transmitting format is：

| 8 Address Bits | 4 Data Bits | Sync．bit |
| :---: | :---: | :---: |

PT2260 has a maximum of ten（10）Address Bits．The following diagram shows the code bits with their corresponding pins．

One Complete Code Word

2 Data：A0 A1 A2 A3 A4 A5 A6 A7 A8 A9 D1 D0 Sync Bit
4 Data：A0 A1 A2 A3 A4 A5 A6 A7 D3 D2 D1 D0 Sync Bit
The Code Bits A0～A7，A8／D3，A9／D2，D1 and D0 are determined by the states set at these pins．For example，when the A0（Pin No．1）is set to＂ 1 ＂（Vcc），the Code Bit A0 is synthesized as＂ 1 ＂bit．In the same manner，when it（A0 Pin）is set to＂ 0 ＂ （Vss）or left floating，the Code Bit A0 is synthesized as a＂ 0 ＂or＂$f$＂bit respectively．

When PT2260 detects＂ 1 ＂on any of the Data pins，it outputs a Code Word at DOUT．If the Data Pin is still in high state（＂ 1 ＂） the time the Code Word transmission ends，PT2260 outputs the same Code Word．Please refer to the diagram below：

## SINGLE OSCILLATOR

The built－in oscillator circuitry of PT2260 allows a precision oscillator to be constructed by connecting an external resistor between OSC and Vcc pins．For PT2270（or PT2272）to decode correctly the received waveform，the oscillator frequency of PT2270（or PT2272）must be $1 / 16 \sim 4$（or 1／16～1／4）times that of the transmitting PT2260．The typical oscillator frequency with various resistor values for PT2260，PT2270，and PT2272 are shown below：

Encoder（PT2260）OSC Frequency

Decoder（PT2272）OSC Frequency

Decoder（PT2270）OSC Frequency

Suggested Oscillator resistor values are shown below．

| PT2260 | PT2272 | PT2270 |
| :---: | :---: | :---: |
| $820 \mathrm{~K} \Omega$ | $510 \mathrm{~K} \Omega$ | $1 \mathrm{M} \Omega$ |
| $1 \mathrm{M} \Omega$ | $620 \mathrm{~K} \Omega$ | $1.2 \mathrm{M} \Omega$ |
| $2 \mathrm{M} \Omega$ | $1.2 \mathrm{M} \Omega$ | $2.2 \mathrm{M} \Omega$ |

## OPERATION FLOWCHART

## ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Conditions | Ratings | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply voltage | Vcc |  | $-0.3 \sim 10.0$ | V |
| Input voltage | VI |  | $-0.3 \sim \mathrm{Vcc}+0.3$ | V |
| Output voltage | VO |  | $-0.3 \sim \mathrm{Vcc}+0.3$ | V |
| Maximum power dissipation | Pa | $\mathrm{Vcc}=10 \mathrm{~V}$ | 500 | mW |
| Operating temperature | Topr |  | $-40 \sim+85$ | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature | Tstg |  | $-65 \sim+150$ | ${ }^{\circ} \mathrm{C}$ |

## DC ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | Test Conditions | Min． | Typ． | Max． | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
