TRIDONIC

IP20 **SELV** ♥ **BIHI** @ **& C € ROHS**

Driver LCI 10 W 350 mA TEC lp

TEC series

LED Driver

Product description

- Fixed output built-in LED Driver
- Constant current LED Driver
- Output current 350 mA
- Max. output power 10 W
- Nominal life-time up to 50,000 h
- For luminaires of protection class I and protection class II
- Temperature protection as per EN 61347-2-13 C5e
- 5-year guarantee

Properties

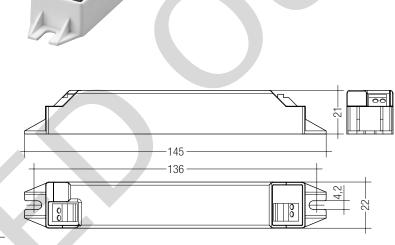

- Casing: polycarbonat, white
- Type of protection IP20

Functions

- Overtemperature protection
- Overload protection
- Short-circuit protection
- No-load protection

EN 61547

EN 62384

Overload protection

If the output voltage range is exceeded the LED Driver reduces the LED output current. After elimination of the overload the nominal operation is restored automatically.

Overtemperature protection

The LED Driver is protected against temporary thermal overheating. If the temperature limit is exceeded the the output current is reduced to limit to at a certain level. The temperature protection is activated typically at 10 $^{\circ}$ C above to max.

Short-circuit behaviour

In case of a short circuit on the secondary side (LED) the LED Driver switches into hic-cup mode. After the removal of the short-circuit fault the LED Driver will recover automatically.

No-load operation

The LED Driver works in constant voltage mode. In no-load operation the output voltage will not exceed the specified max. output voltage (see page 1).

Expected life-time

Туре	ta	40 °C	50 °C	60°C	
LCI 10W 350mA TEC lp	tc	70 °C	80°C	×	
ECITION SSOUR TECTP	Life-time	50,000 h	30,000 h	X	

The LED Driver is designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %.

Storage conditions

Humidity: 5 % up to max. 85 %,

not condensed

(max. 56 days/year at 85%)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

Mounting of device

Max. torque for fixing: 0.5 Nm/M4

Maximum loading of automatic circuit breakers

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrus	sh current
Installation Ø	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	1.5 mm ²	1.5 mm ²	1.5 mm ²	2.5 mm ²	Imax	Time
LCI 10W 350mA TEC Ip	120	160	200	240	60	80	100	120	10 A	100 µs

Installation instructions

The LED module and all contact points within the wiring must be sufficiently insulated against 2.5 kV surge voltage.

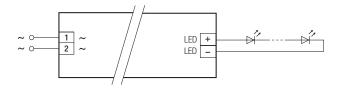

Air and creepage distance must be maintained.

Replace LED module

- 1. Mains off
- 2. Remove LED module
- 3. Wait for 20 seconds
- 4. Connect LED module again

Hot plug-in or secondary switching of LEDs is not permitted and may cause a very high current to the LEDs.

Wiring diagram

Glow wire test according to IEC 60695-2-11

850 °C passed.

Isolation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 V $_{\rm DC}$ for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least 2 M Ω .

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V $_{AC}$ (or 1.414 x 1500 V $_{DC}$). To avoid damage to the electronic devices this test must not be conducted.

Efficiency vs load

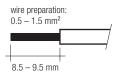

Diagrams LCI 10W 350mA TEC lp

84 82 80 76 74 72 45 75 100 Load [%]

Wiring type and cross section

The wiring can be in stranded wires with ferrules or solid with a cross section of $0.5-1.5\ \text{mm}^2$.

Strip 9.5 mm of insulation from the cables to ensure perfect operation of push-wire terminals.

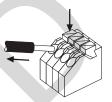

Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Mains leads should be kept apart from LED Driver and other leads (ideally 5 – 10 cm distance)
- Max. lenght of output wires is 2 m.
- · Secondary switching is not permitted.
- Incorrect wiring can demage LED modules.
- The wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

Release of the wiring

Press down the "push button" and remove the cable from front.
