ProtoSnap - LilyPad Development Board

PRODUCT DETAILS

The ProtoSnap series is a new way to prototype your project without a breadboard. Everything is wired together on a single board, which makes it easy to explore the possibilities of the components before snapping them apart and building them into your project.

The ProtoSnap LilyPad Development Board is designed to get you started in the world of e-textiles. Combining a LilyPad Simple Board with other LilyPad components like a buzzer, a vibration motor, an RGB LED, a button, a switch, five LEDs, a light sensor, and a temperature sensor, the ProtoSnap LilyPad Development Board lets you dive right into wearable electronics. When you've learned how to program the LilyPad Arduino Simple Board, break apart the components and explore the power of the LilyPad platform.

Included on the Board:

1 x LilyPad Simple Board
1 x LilyPad Button
1 x LilyPad Slide Switch
5 x LilyPad White LED
1 x LilyPad RGB tri-color LED
1 x LilyPad Light Sensor
1 x LilyPad Temp Sensor
1 x LilyPad Buzzer
1 x LilyPad Vibe board

Kit Also Includes:
1 x LilyPad FTDI Basic
