# SEEED-114992624

Trippy Rgb Waves Kit

PRODUCT DETAILS

Features

- Easy to build
- Step-by-step instructions provided
- Includes a PC board, a battery, and all of the electronic components you need to solder together and make your kit work
- Interactive light patterns

Description

Anyone can learn to solder! This kit was designed for people who have never made anything before. Simple step-by-step instructions show you how. Once you finish, you get a trippy mood light that changes colors on its own. If you have a few of them, then you get interactive colored-light art!

Imagine a bunch of little lights, each about the size of a chess piece. Each one continually slowly changes colors on its own...until you disturb them!

When you wave your hand over them, it creates waves of colors that follow your hand.

It takes about 90 minutes to make this kit.

Specifications

Specification	Details
Size (mm)	Length: 121 Width: 83 Height: 13
Weight (g)	Gross weight: 14 Net weight: 14
Battery Type	CR2032 coin-cell (included, though it may be weak or dead)
Voltage	3V

Part List

- PCB
- Electronic components
- Battery
