3-to-8 Line Decoder

With 5V–Tolerant Inputs

The MC74LVX138 is an advanced high speed CMOS 3-to-8 line decoder. The inputs tolerate voltages up to 7.0 V, allowing the interface of 5.0 V systems to 3.0 V systems.

When the device is enabled, three Binary Select inputs (A0 - A2) determine which one of the outputs $(\overline{O0} - \overline{O7})$ will go Low. When enable input E3 is held Low or either $\overline{E2}$ or $\overline{E1}$ is held High, decoding function is inhibited and all outputs go high. E3, $\overline{E2}$, and $\overline{E1}$ inputs are provided to ease cascade connection and for use as an address decoder for memory systems.
