## Current Transducer HOYS-S series

Ref: HOYS 100-S-0100, HOYS 200-S-0100, HOYS 400-S-0100, HOYS 500-S-0100, HOYS 560-S-0100

For the electronic measurement of current: DC, AC, pulsed..., with galvanic separation between the primary and the secondary circuit.

## 5xat

## Features

- Open loop multi-range current transducer
- Voltage output
- Single supply +5 V
- Overcurrent detect $2.93 \times I_{\text {PN }}$ (peak value)
- Galvanic separation between primary and secondary circuit
- Low power consumption
- For busbar mounting
- Aperture: $21.5 \times 13 \mathrm{~mm}$
- Factory calibrated
- Mating JST connector:
- housing PAP-05V-S
- contact SPHD-00xT-P0.5.

## Advantages

- Low offset drift
- Over-drivable $U_{\text {ref }}$
- Creepage / clearance > 10.5 mm
- Fast response
- Low profile 2 mm pitch connector for 22 to 28 AWG wire.

## Applications

- AC variable speed and servo motor drives
- Static converters for DC motor drives
- Battery supplied applications
- Uninterruptible Power Supplies (UPS)
- Switched Mode Power Supplies (SMPS)
- Power supplies for welding applications
- Combiner box
- Solar inverter on DC side of the inverter (MPPT).

## Standards

- IEC 61800-2: 2015
- IEC 61800-3: 2004
- IEC 61800-5-1: 2007
- IEC 62109-1: 2010
- UL 508: 2013.

Application Domain

- Industrial.

## Safety

Caution
If the device is used in a way that is not specified by the manufacturer, the protection provided by the device may be compromised. Always inspect the electronics unit and connecting cable before using this product and do not use it if damaged. Mounting assembly shall guarantee the maximum primary conductor temperature, fulfill clearance and creepage distance, minimize electric and magnetic coupling, and unless otherwise specified can be mounted in any orientation.

Caution, risk of electrical shock
This transducer must be used in limited-energy secondary circuits SELV according to IEC 61010-1, in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating specifications.

Use caution during installation and use of this product; certain parts of the module can carry hazardous voltages and high currents (e.g. power supply, primary conductor).

Ignoring this warning can lead to injury and or/or cause serious damage.
De-energize all circuits and hazardous live parts before installing the product.
All installations, maintenance, servicing operations and use must be carried out by trained and qualified personnel practicing applicable safety precautions.

This transducer is a build-in device, whose hazardous live parts must be inaccessible after installation.
This transducer must be mounted in a suitable end-enclosure.
Besides make sure to have a distance of minimum 30 mm between the primary terminals of the transducer and other neighboring components.

Main supply must be able to be disconnected.
Always inspect the flexible probe for damage before using this product.
Never connect or disconnect the external power supply while the primary circuit is connected to live parts.
Never connect the output to any equipment with a common mode voltage to earth greater than 30 V .
Always wear protective clothing and gloves if hazardous live parts are present in the installation where the measurement is carried out.
This transducer is a built-in device, not intended to be cleaned with any product. Nevertheless if the user must implement cleaning or washing process, validation of the cleaning program has to be done by himself. When defining soldering process, please use no cleaning process only.

ESD susceptibility
The product is susceptible to be damaged from an ESD event and the personnel should be grounded when handling it.
Do not dispose of this product as unsorted municipal waste. Contact a qualified recycler for disposal.

## Absolute maximum ratings

| Parameter | Symbol | Unit | Value |
| :--- | :---: | :---: | :---: |
| Supply voltage（not destructive） | $U_{\mathrm{C}}$ | V | 8 |
| Supply voltage（not entering non standard modes） | $U_{\mathrm{C}}$ | V | 6.5 |
| Primary conductor temperature | $T_{\mathrm{B}}$ | ${ }^{\circ} \mathrm{C}$ | 120 |
| Electrostatic discharge voltage | $U_{\text {ESD }}$ | kV | 2 |

Stresses above these ratings may cause permanent damage．Exposure to absolute maximum ratings for extended periods may degrade reliability．

## UL 508：Ratings and assumptions of certification

File \＃E189713 Volume： 2 Section： 5

## Standards

－CSA C22．2 NO．14－10 INDUSTRIAL CONTROL EQUIPMENT－Edition 12
－UL 508 STANDARD FOR INDUSTRIAL CONTROL EQUIPMENT－Edition 17
Ratings

| Parameter | Symbol | Unit | Value |
| :--- | :---: | :---: | :---: |
| Primary involved potential |  | V AC／DC | 600 |
| Max surrounding air temperature | $T_{\mathrm{A}}$ | ${ }^{\circ} \mathrm{C}$ | 105 |
| Primary current | $I_{\mathrm{P}}$ | A | According to series primary <br> current |
| Secondary supply voltage | $U_{\mathrm{C}}$ | V DC | 5 |
| Output voltage | $U_{\text {out }}$ | V | 0 to 5 |

## Conditions of acceptability

1 －These devices have been evaluated for overvoltage category III and for use in pollution degree 2 environment．
2 －A suitable enclosure shall be provided in the end－use application．
3 －The terminals have not been evaluated for field wiring．
5 －Primary terminals shall not be straightened since assembly of housing case depends upon bending of the terminals．
6 －Any surface of polymeric housing have not been evaluated as insulating barrier．
7 －Low voltage control circuit shall be supplied by an isolating source（such as a transformer，optical isolator， limiting impedance or electro－mechanical relay）．

## Marking

Only those products bearing the UR Mark should be considered to be Listed or Recognized and covered under UL＇s Follow－Up Service．Always look for the Mark on the product．

## Insulation coordination

| Parameter | Symbol | Unit | Value | Comment |
| :--- | :---: | :---: | :---: | :--- |
| RMS voltage for AC insulation test $50 / 60 \mathrm{~Hz} / 1 \mathrm{~min}$ | $U_{\mathrm{d}}$ | kV | 5.4 |  |
| Impulse withstand voltage $1.2 / 50 \mu \mathrm{~s}$ | $U_{\mathrm{Ni}}$ | kV | 9.6 |  |
| Partial discharge RMS test voltage $\left(q_{\mathrm{m}}<10 \mathrm{pC}\right)$ | $U_{\mathrm{t}}$ | V | 1650 | Busbar／secondary． <br> According to： <br> IEC 61800－5－1 <br> IEC 62109－1 |
| Clearance（pri．－sec．） | $d_{\mathrm{Cl}}$ | mm | $>10.5$ | Shortest distance through air |
| Creepage distance（pri．－sec．） | $d_{\mathrm{Cp}}$ | mm | $>10.5$ | Shortest path along device body |
| Case material | - | - | V0 | according to UL 94 |
| Comparative tracking index | $C T I$ |  | 600 | Reinforced insulation according to <br> IEC 61800－5－1 <br> CAT III PD2 |

## Definition of typical，minimum and maximum values

Minimum and maximum values for specified limiting and safety conditions have to be understood as such as well as values shown in＂typical＂graphs．
On the other hand，measured values are part of a statistical distribution that can be specified by an interval with upper and lower limits and a probability for measured values to lie within this interval．
Unless otherwise stated（e．g．＂100 \％tested＂），the LEM definition for such intervals designated with＂min＂and＂max＂is that the probability for values of samples to lie in this interval is 99.73 \％．
For a normal（Gaussian）distribution，this corresponds to an interval between -3 sigma and +3 sigma．If＂typical＂values are not obviously mean or average values，those values are defined to delimit intervals with a probability of $68.27 \%$ ，corresponding to an interval between－sigma and＋sigma for a normal distribution．
Typical，minimum and maximum values are determined during the initial characterization of the product．

## Measuring range versus external reference voltage

## Measuring range versus external reference voltage

HOYS 100．．．560－S 0100

## Maximum continuous DC current

For all ranges：

Important notice：whatever the usage and／or application，the transducer primary bar／jumper temperature shall not go above the maximum rating of $120^{\circ} \mathrm{C}$ as stated in page 3 of this datasheet．

## HOYS-S series: name and codification

HOYS-S family products may be ordered on request ${ }^{1)}$ with a dedicated setting of the parameters as described below (standard products are delivered with the setting 0100 according to the table).

| Internal reference ${ }^{2)}$ |  |  |  | Con |  | rent |  |  |

|  | Lis order to improve them, without prior notice |

## Application information

HOYS－S series is designed to be used with a bus－bar or cable ${ }^{1)}$ to carry the current through the aperture with a maximum cross－ section of $21.5 \times 13 \mathrm{~mm}$ ．

Note：${ }^{1)}$ The maximum magnetic offset referred to primary is inversely proportional to the number of turns，thus is divided by 2 with 2 turns．

## Remark

Installation of the transducer must be done unless otherwise specified on the datasheet，according to LEM Transducer Generic Mounting Rules．Please refer to LEM document N ${ }^{\circ}$ ANE120504 available on our Web site：https：／／www．lem．com／en／file／3137／ download／．

Insulation distance（nominal values）：

| :--- | :---: | :---: |
| Between primary busbar and secondary pins | 20.7 mm | 20.7 mm |
| Between primary busbar and core | 16.9 mm | - |
| Between core and secondary terminal | 11.9 mm | 11.9 mm |

HOYS 100...560-S 0100
Dimensions (mm, general linear tolerance $\pm 0.3 \mathrm{~mm}$ )

## Remarks:

- $U_{\text {out }}$ is positive with respect to $U_{\text {ref }}$ when positive $I_{\mathrm{p}}$ flows in direction of the arrow shown on the drawing above.
- Connection system equivalent to JST B05B-PASK
- Transducer fastening

1 hole $\varnothing 4.5$ mm
1 steel screw M4
Recommended fastening torque $3.5 \mathrm{~N} \cdot \mathrm{~m}$
